Description of Damage to Aircraft and Other Property *(Use additional sheet, if necessary.)*

Main Rotor Blades Struck the tailboom and severed the rear 25% of the the tailboom. Damage to both rotor blades, Tailrotor Gearbox and Tail Rotor Blades and 1" Driveshaft and mounts.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink.)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

At 07:48 the pilot had taken off with a load of herbicide to continue an application to pasture land, and at approximately a quarter of a mile from the truck and 75' above the ground the engine quit due to fuel starvation. The pilot commenced an autorotation and during the landing the rotor blades deflected down and contacted the tailboom. The pilot had been flying for .7 hours on the day of the incident.

The pilot secured the aircraft, and there were no injuries.

The pilot landed on a level grassy field.

OPERATOR/OWNER SAFETY RECOMMENDATION *(How could this accident/incident have been prevented?)*

After speaking with the pilot, he stated that he had become fixated on getting the job done and lost track of how long he had been flying.

It is our policy that all fuel tanks are checked to determine how much fuel is onboard prior to each days operation. Fuel is to be metered into the tank and monitored to ensure you do not exhaust your supply of fuel.

Properly monitoring your fuel levels. Communication with your crew, how much fuel you have onboard and how long you can fly on that fuel load. Asking them to remind you after you have been flying for an established amount of time that will allow the safe operation of the aircraft.

Notes

As I was flying, I became preoccupied touching up areas, taking longer than I had expected. Flying across the field to start my next pass I heard the engine roll back, immediately I knew what had happened and entered an autorotation. I picked a spot to land and started going towards it. I started my flare when I thought it was appropriate and as I leveled, I pulled collective. I touched down on the back of the skids and the helicopter hopped to a stop. It was a firm landing but was able to walk away unscathed.

Once the rotor stopped turning, I checked the fuel to confirm my suspicion. The fuel stick indicated I was empty.

This was nothing other than pilot negligence and am thankful to walk away from such an incident.

Observer: Chad Geis

I was located at the mix truck observing the operations when the helicopter began a rapid rate of descent. The helicopter landed hard over a hill beyond my vision, and I heard a bang. I immediately drove to the helicopter which took less than a minute and saw the pilot out of the aircraft walking and looking at the condition. The aircraft had landed hard, and the main rotor struck the tail boom causing damage to the tail boom. Upon reaching the aircraft the pilot stated that he had run out of fuel.

Action Taken After Incident

I immediately contacted Rick Chase in the corporate office and informed him that the pilot was ok and had told me that he did not hurt anywhere. Photos were taken of the aircraft and then the helicopter was picked up with machine and loaded on its transport trailer.

Observer: Todd Plunkett
