Description of Damage to Aircraft and Other Property *(Use additional sheet, if necessary.)*

Airplane's LH landing gear folded under fuselage pushing gear up into the LH floor pan..LH door upper hinge was broke loose from fuselage. Front engine cowling is bent and buckled on both R&L sides lower. LH exhaust pipe is bent over to the right. Fuselage has buckles behind LH door. LH wing tip hit ground and skin is dented on outer LH wing. No damage to any other property.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink.)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

On Sunday, April 6th at 4pm I started flying with Chris Huber in a Luscombe 8F, N9926C. It was the 6th time I flew with him working towards the 10hrs of dual his insurance company required and a tailwheel endorsement. At the time we started I had given him 6.7 hrs of instruction in the airplane. The wind conditions that day were variable out of the NW to SW at less than 10 knots, but when we started flying the wind was almost right down runway 29 (grass runway). We started working on wheel landings the lesson before and continued to do so on this one. We did 9 landings on runway 29 with the wind varying back to the SW. After the 9th landing I told Chris lets do one more, but to come around to a downwind on 17 which is concrete. As we were climbing out on 29 and coming around to a left downwind to 17, I noticed the windsock was SSW at the time still around 10. We came around landed with somewhat of a crosswind but the plane touched down pretty much on the center line. (at that point things seemed to be fine) As the tail came down, the airplane seemed to get a little squirrely and the nose even went a little to the left and then came back into a right hand turn in which I had full left rudder applied (the airplane has no brake pedals on the RH controls) but the airplane continued in its RH direction. Chris had full LH brakes applied to no avail. We went off the RH side of the runway into the grass and stopping in the drainage ditch along the west side of runway 17. The nose was up against the bank of the ditch with the tail up off the ground and the LH landing gear folded under the fuselage and left wintip in the dirt. Checked to see if anyone was injured, got out of the plane as fuel was leaking some from the wings. Shut off master switch and mag switches. This ts my account of what happened to the best of my recollection.

OPERATOR/OWNER SAFETY RECOMMENDATION *(How could this accident/incident have been prevented?)*

I guess in my opinion, the one way this accident could have probably been prevented was to not make the decesion to land on runway 17 and to have made our last landing still on runway 29 which is the grass runway where we had made the previous 9 landings

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on a separate sheet.)Was there Mechanical Malfunction/Failure? ☐ Yes ☒ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)
