Description of Damage to Aircraft and Other Property *(Use additional sheet, if necessary.)*

Left wing crumpled, left side of landing gear folded back up, left propeller was bent, and damage to the engine air intake.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink.)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

I was doing a flight Lesson with an instructor in a PA-44-180, I had just done a normal landing into St. James Municipal (KJYG) on runway 15 with winds variable at 6kts and I had gotten the weater about 7 minutes before this first landing. I did a full-stop back taxi on runway 15. I ran through the after-landing checklist and before-takeoff checklist. I then went to perform a short field takeoff and was going to do a short field landing on this next lap in the pattern. I had a normal short-field takeoff profile and stayed in the pattern. I turned crosswind, then downwind. On downwind when I was abeam the numbers I called out, below 140kts lower the gear, saw three in the green on the display and the wheel in the mirror. After I called below 111kts, I dropped the first notch of flaps and called three in the green one in the mirror. I then made my radio call for the base leg and dropped the second notch of flaps and was going 90 kts I called below 100 kts props full forward. I then turned final for runway 15 and lowered my third notch of flap and called three in the green one in the mirror, as well as red, blue, green runway is clean. I was going in at about 80 kts on final so slightly fast for a short field landing. By the time I was over the runway, my speed had dropped to around 75 kts. My aim point for this short field landing was the second center line stripe. I touched down near the end of the second centerline stripe and I was lined up with the middle of the runway and was straight. When I landed I noticed a vibration/shaking that seemed come from below my feet and then I went to apply some brake pressure. Around the time I did that, either slightly before or after, the plane yawed hard to the left and I then tried to counter that yaw with right rudder but it did little to counter it and it was almost impossible to maintain directional control. The plane slightly went back to the right but it wasn't enough to stop it from going off of the runway on the left side. When the plane went off the side of the runway it hit a light and then the right wheel was slightly able to get back on the runway before it eventually yawed hard to the left again and spun the plane about 130-145 degrees to the left which is where it came to a stop. I am unsure of what the noise/vibration was upon landing or why the plane yawed hard to the left. The landing was not harder than normal. On the runway, you could see the tire marks from where the plane initially yawed hard to the left. You could also see where I tried to use the right rudder to counter it as the tire marks make a slightly curved line trying to get back to the center line but was unsuccessful due to the hard pull to the left.

OPERATOR/OWNER SAFETY RECOMMENDATION *(How could this accident/incident have been prevented?)*

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on a separate sheet.)Was there Mechanical Malfunction/Failure? ☐ Yes ☐ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)
