Description of Damage to Aircraft and Other Property *(Use additional sheet, if necessary.)*

Left side of the aircraft is including propeller, wing and gear completely broken. Propeller twisted, skin of the wing has damage and left main gear dig down to the ground or under the aircraft no visible. The left wing hit KJYG runway edge light around 1,000 feet marker.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink.)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Date of incident: May 10 2025, Time of Incident: 11:45AM, Flight Start time 10:20
Student Pilot Brevan Grigus on the left seat, Instructor Pilot Hwijong Seo on the right seat.

This flight was a mock stage check for the commercial flight lab course. We departed from Mankato Airport at approximately 10:40 AM. The preflight inspection and takeoff were normal, with no anomalies reported

We followed the student's planned route, cruising southwest at 8,500 feet. As part of the training, we simulated a left engine failure, performing a full engine shutdown followed by an unfeathered and restart procedure. After that, we initiated a simulated emergency descent from 8,000 feet to 3,500 feet and diverted to St. James airport.

The first traffic pattern and landing at St. James were uneventful. The student approached slightly fast on final, but the landing was completed within ACS.

We then performed a short field takeoff and stayed the pattern. On the second pattern, the student came in slower. We verified taht all systems - Landing gear, lights, flaps, mixture, and propeller - were in the correct configuration. The landing was slightly rough, with the stall warning horn sounding just before touchdown. However it was not noticeably hard landing.

Upon landing, the aircraft suddenly yawed to the left and began to shake. I applied full right rudder to counteract the motion, but it was not sufficient to stop the force. the aircraft struck a runway edge light, resulting significant damage to the left side of the aircraft. Then the aircraft dig down to the grass next to the runway.

Both pilots were unharmed and exited the aircraft safely. After coming to a full stop, I immediately secured the aircraft by shutting off the fuel selector, pump, and all other systems.

Both pilots suspected flat tire or landing gear malfunction on the left side.

OPERATOR/OWNER SAFETY RECOMMENDATION *(How could this accident/incident have been prevented?)*

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on a separate sheet.)Was there Mechanical Malfunction/Failure? ☐ Yes ☐ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)
