DAMAGE TO AIRCRAFT AND OTHER PROPERTY**Aircraft Damage**

- ☐ None ☐ Substantial
☒ Minor ☐ Destroyed
 ☐ Unknown

Aircraft Fire

- ☒ None ☐ Both Ground and In-Flight
☐ In-Flight ☐ Fire at Unknown Time
☐ On-Ground ☐ Unknown

Aircraft Explosion

- ☒ None ☐ Both Ground and In-Flight
☐ In-Flight ☐ Fire at Unknown Time
☐ On-Ground ☐ Unknown

Description of Damage to Aircraft and Other Property *(Use additional sheet, if necessary.)*

Minor damage to sheet metal on bottom of aircraft and the trailing inside edge of the flaps, plus damage to a few antennas, the rotating beacon, as well as major damage to both propellers. Also, damage to the left landing gear "bellcrank", which physically broke in half, and a failure of the left landing gear strut, which over-extended and jammed in the left wheel well.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink.)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

The aircraft was intended to be flown in left hand traffic patterns to RWY 16, for the purpose of its first test flight after about 25 years of not being flown, plus an extensive maintenance and an annual inspection.

During the third traffic pattern, the left landing gear broke, and necessitated a gear up landing.

The runway was foamed by ARFF, and a successful gear-up landing was performed. No injuries to any person.

A crane was used to raise the disabled aircraft from the runway, where all three landing gear were extended, and the aircraft was tugged to a parking location on the airport.

OPERATOR/OWNER SAFETY RECOMMENDATION *(How could this accident/incident have been prevented?)*

I was personally present when the landing gear was cycled on jacks, and with my extensive experience with "cabin class" Cessna Twin aircraft, I did not see typical failures or misriggings. Unfortunately, it's my belief that the left strut was improperly rebuilt during the extensive maintenance prior to this flight, which allowed the strut to over-extend.

My recommendation would be for a simple strap or other device that acted as a secondary strut retention device.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on a separate sheet.)Was there Mechanical Malfunction/Failure? ☒ Yes ☐ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)

There was two physical failures:

1) The left landing gear strut over-extended, and jammed itself into the wing wheel well.

2) The above failure caused the left landing gear "bellcrank" to fail, however it showed signs of a fracture, likely from a previous gear-up landing
