Damage to nose gear, propellers, cowling, and firewall.

**NARRATIVE HISTORY OF FLIGHT** *(Please type or print in ink.)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

It was my first time flying in N71149. I was instructed to do a runup and fly in the pattern. I obtained the weather information from CVX's ASOS. After the runup, the plane seemed fine so I proceeded to take off. I departed around 11:28 local time. I rotated after 60 mph and the plane began to come off the ground. The takeoff required more back pressure on the yoke than I was used to on the Skylane I usually flew. The aircraft wanted to pitch back down, so I had to add trim. I think I bounced twice during the takeoff roll. I trimmed the aircraft even more for a climbing pitch. I turned crosswind and began to trim and reduce power for level flight as I approached 1000 ft AGL. On downwind I trimmed for 100 mph. On base I trimmed for 80 mph. On final I trimmed for 75 mph. The landing configuration was with no flaps per company recommendation. The approach felt normal. When I had the runway made, I reduced power and prepared to flare. As I began pulling the yoke back to flare I noticed that the nose was not pitching up. I pulled the yoke even further back but it did not help. The plane landed on its nose wheel and bounced to a stop. The aircraft was disabled and I called for help moving it off the runway. The crash happened around 11:30 local time.
