NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink.)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

On June 8, 2025 about 5:15 PM, I was departing KMWL in a Cessna 182 #7376N with my family to KUTS Huntsville. After completing the final weather check, the checklist, and normal runup, I announced a departure on Runway 13. The takeoff was uneventful until about 200 feet when the engine stopped. The fuel, prop, and throttle were all full forward. When I looked down at the fuel valve it was off. I had obviously missed this on the checklist. I instinctively turned the valve to both tanks but then realized I was too low to safely restart the engine. I was near the end of the runway with trees ahead and to all sides at 45 to 60 degree angles. I determined to turn 90 degrees right and land on the airport grass where the longest distance was available before encountering trees and fence (about 300–400 feet). There was about 15 to 20 seconds from the time the engine quit until impact. I turned at a 45–50 degree bank attempting to lose both altitude and speed quickly to land within the safe distance before trees. I kept the plane at an angle near the ground since there was inadequate roll distance available. My plan was to sacrifice the plane in order to keep my family safe. The plane predictably stalled with 25 degrees of flaps at 45 knots about 8 feet above the ground with the right wheel/tire and nose wheel impacting the ground. We evacuated immediately after impact and I used the fire extinguisher to douse electrical smoke at the firewall under the cowling (it had dislodged). The ELT engaged so I told the sergeant on the phone that were all without injury and required no assistance.

OPERATOR/OWNER SAFETY RECOMMENDATION *(How could this accident/incident have been prevented?)*

The cause of the accident was pilot error from failure to move the fuel valve to the "both" position. This step was missed on the checklist. A probable contributing cause was the removal of a stop device that a prior owner had installed to prevent the fuel valve from being off. This was removed during an engine valve overhaul and replacement six months prior. The plane had been flown for 1.5 years with this block in place then 6 months without this valve stop. Primacy may have contributed to missing this on the checklist.

The lack of standard operating procedures was the major reason for this accident. I told my hanger mate and friend that I would not fly any more since I could unknowingly do a similar thing again. I was not going to risk my family. Being a retired United pilot with 35,000 hours, he told me not to rush to that decision because there was an answer. He informed me of the SOP he uses with his wife when they fly Part 91. They both have a checklist and she reads off the list and they confirm that each step has been completed. I knew this was standard for commercial flights but I had not yet learned this technique for Part 91 flights. This SOP technique would have prevented this accident.
