Description of Damage to Aircraft and Other Property (Use additional sheet, if necessary.)

Propeller contacted runway surface and is destroyed.
 Tail section of aircraft contacted the runway and is damaged beyond repair.
 Left wing tip and aileron contacted the runway and sustained significant damage.
 Right wing tip contacted the runway and sustained minor damage.
 Both main landing gear are bent under the lower fuselage section.
 Forward section of the fuselage was pushed/bent into the cockpit area. See pictures sent to Jennifer Rodi on 06/17/2025 @1427 (CDT).

NARRATIVE HISTORY OF FLIGHT (Please type or print in ink.)

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

On Tuesday 17 June, 2025 at 10:41 am (CDT) my wife and I departed Heber Springs, AR (KHBZ) on an IFR flight plan for our home field 1XA7. At 1824z I had a landing mishap with our RV-14 N852BJ serial no.140856 on runway 27 at our home field, the Gloster Aerodrome (1XA7). I estimated the winds to be 210-220 at 10-15 Kts. Runways 02/20 & 07/25 were closed due to moisture content (wet conditions). The local area flat terrain was not a factor in the mishap. I touched down in the first one third of the runway, during the landing rollout I received end of runway "rush" and applied the wheel brakes without having "pinned" the tailwheel. The propeller contacted the runway surface which caused instant deceleration (transverse "G"). With my feet on the brake pedals more brake pressure was applied and the control stick went forward, causing the aircraft to "flip". The aircraft ended right side up resting on it's propeller hub. My wife Judy and I exited the aircraft inside of thirty seconds with NO injuries! On 06/17/2025 @1427 (CDT) Jennifer Rodi with the NTSB was sent picture of our mishap aircraft.

Respectfully,
 William F Oehl, Jr. ATP

OPERATOR/OWNER SAFETY RECOMMENDATION (How could this accident/incident have been prevented?)

During tail wheel training, instructors can not emphasis enough to have their students stay OFF of the brakes during a landing in a tail wheel aircraft. While landing a tail wheel aircraft there should be no need for applying brakes, if you do have a need to apply brakes make sure the tail wheel is "pinned" to the runway. During the landing rollout in a light GA aircraft should you experience end of runway "rush" as I did, GO AROUND! I planned to land at a 4000' asphalt runway due the the wet conditions at our home airfield. Runway 27 (the shortest of our three runways) was declared open just before my departure from Heber Springs, AR. I should have taken the conservative option and go as initially planned!

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on a separate sheet.)Was there Mechanical Malfunction/Failure? ☐ Yes ☒ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)
