Description of Damage to Aircraft and Other Property *(Use additional sheet, if necessary.)*

Helicopter experienced a dynamic roll over resulting in main rotor blades contacting the ground and rolling the helicopter on its right side. Rotors destroyed along with significant transmission damage.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink.)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

My intended destination was the Cabana Blue Restaurant in Clay Township, MI.

I had visited this property and landing area by helicopter previously, and called Cabana Blue for permission for this landing in advance of my arrival.

At approximately 1300 EDT, I completed a fly over from two angles of my intended landing area, I then proceeded quite a distance from the landing site to set up a gradual and slow approach to the spot I selected.

I approached my selective landing spot very slowly in a low in ground effect hover. When I first set the helicopter down on both skids, I felt the tail of the helicopter drop backwards so then added collective and I believe forward cyclic which I believe induced a dynamic rollover of the machine. There was a quartering tail wind with some gusts coming off the lake that day which may or may not have complicated my situation.

There are two video's of this landing accident from two different angles readily available online, which I believe will show the accident better than any sketches I could offer or any pictures I took of the helicopter and crash site. I'm happy to submit the photo's I have if requested.

Chris Osborne

OPERATOR/OWNER SAFETY RECOMMENDATION *(How could this accident/incident have been prevented?)*

I believe when I first touched both skids down that I should have continued my landing by fully lowering my collective. A dynamic roll over is pilot induced, therefore, I take full responsibility as my collective and cyclic movements clearly induced this rollover.
