Narrative for events of June 25, 2025, for Cody Veach in Cirrus SR 22 N670P:

I took off from Unionville Municipal Airport and landed at Centerville (TVK) to fuel the plane before taking off for Mount Vernon, MO. I entered my flight information into the Avionics of the Cirrus while at Centerville before departing for Mount Vernon. I then took off for Mount Vernon and hand-flew the entire trip with no issues at 4500 feet. I landed at Mount Vernon with no issues. I met with my uncle and aunt for lunch then returned to the airport to fly back to Unionville, MO. I entered the return flight information into the Avionics of the Cirrus before departing from Mount Vernon. The flight home was uneventful. I hand-flew that entire flight as well.

As I came into Unionville, I located the airport then got in the traffic pattern and got in the left downwind position for runway 17. I flipped my flaps to 50%, turned left base, continued in the pattern, turned final for 17 and flipped my flaps to 100% and began my decent. My decent seemed normal. I noted crossing the threshold at 78 knots. I rounded out and expected to begin my float when the plane seemed to drop 3 or 4 feet and created a bounce. I assumed this was due to high density altitude. Once the plane bounced, it ballooned up what seemed to be 8 or 10 feet so I decided to do a go-around. I reached down and flipped my flaps to 50% and took the power to full. At that time, the left wing dropped and the plane took a hard left. Then I was on the right rudder and steering to the right until the plane struck the ground. Once the plane came to a stop, I saw fuel running out of the wings so I exited the plane from the open front to remove myself from the aircraft.
