Description of Damage to Aircraft and Other Property *(Use additional sheet, if necessary.)*

Engine seperation, wing damage from impact with tree

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink.)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Departed out of KAFW at approximately 0800 local. Normal VFR departure with flight following. As I approached KIKG I requested a decent below the Kingsville 3 MOA due to extensive military traffic traveling through the area. I then continued my descent to maintain VFR cloud clearances, I advised I had KIKG in sight after I received the AWOS for the field. I remember the AWOS reporting clear below 12 thousand and making a comment that thats incorrect, because I was around 5000 to maintain cloud clearance. On a 5 mile final I glanced at the on-board weather and saw storms approaching from the south and made another comment "we may spend the night here, I don't want to race a storm". At around a 3 mile final checked speed and lowered the gear and first notch of flaps. I made the comment to the passengers that it might get a little bumpy over the fence due to the trees at the arrival end. I was slightly high on the glide slope as all 4 lights were white, I made the comment that we were stable and had plenty of concrete in front of us, so I wasn't going to do anything "crazy" to intercept the glide slope. As we crossed the arrival end I noticed the PAPI lights turn slightly pink, and in the number 2 radio heard a wind shift broadcasted on the AWOS. I then attempted a normal landing with cross wind corrections applied to the flight controls. As I touched down, the aircraft bounced twice. It was at this point I initiated a go around to prevent porpoising down the runway. As I applied full power for the go-around, I saw a positive rate on my altimeter, and retracted the landing gear. It was at this point the aircraft pitched up and yawed nose left. I attempted to lower the wing using aileron and then rudder. The aircraft was not responding to control inputs. After recognizing this, I said "brace, we are crashing" My whole objective at this point was to get the wings level to prevent cartwheeling. The aircraft came to rest after impact with a tree. Once the aircraft came to a stop, my next words were "get out and get away". I assisted in opening the cabin door for the front passenger to evacuate first, I then held the right seat back forward so the rear passenger could evacuate. I then reached down to turn off the master before evacuating the aircraft.

OPERATOR/OWNER SAFETY RECOMMENDATION *(How could this accident/incident have been prevented?)*

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on a separate sheet.)Was there Mechanical Malfunction/Failure? ☐ Yes ☐ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)
