Arrived at the airport approximately 1:30 PM. Opened the hanger and proceeded to dust off the airplane. Turned on master switch and lowered the flaps. Turned off master switch and started an inspection of the airplanes exterior and moveable surfaces (flaps, wheels, etc.). Checked fuel for amount and possible contamination in right wing then left wing then engine. Checked oil level, prop and belt.. Checked interior for check lists (before take off / before landing current maps, directory, storage area, loose objects, head sets, etc.. Raised flaps and proceeded to pull the plane out of the hanger.

Started the plane using a pre-start check list. Turned equipment on (radios, lights, etc.) Taxied approximately 100 yards to the FBO to pick up an individual who is also a pilot. Moved from the FBO to a run-up area adjacent to rwy 14/32. Conducted the run-up using the Before Take-off Check List. Taxied to and held short cleared area announced position and intention to back taxi 14 for a 32 departure. Entered the runway and taxied to the end of 32. Rechecked instruments (radios, DG, etc.) confirmed doors, seat belts and windows were closed/locked and started take off.

As normal for that airplane, rotation starts at 60 mph. Glanced at the airspeed and at just over 60 started to pull back on the yoke. At that point, the yoke was pulled back and I look over and saw that he had pulled the airplane into a max. performance climb attitude. My immediate reaction was to release the yoke and call out "Your Airplane". He transitioned to level flight. And, then into a shallow left hand turn. Apparently, the undercarriage or wing hit tree(s). The airplane pitched down into a vertical dive and impacted with the water.

The four enclosed pictures shows the damage to the airplane .
