NOTAMS (D and FDC), AIRMETS, SIGMETs, PIREPs in effect at the time of the accident/incident:

Airventure Notam, TFR

DAMAGE TO AIRCRAFT AND OTHER PROPERTY					
Aircraft Damage ☐ None ☒ Substantial ☐ Minor ☐ Destroyed ☐ Unknown	Aircraft Fire ☒ None ☐ Both Ground and In-Flight ☐ In-Flight ☐ Fire at Unknown Time ☐ On-Ground ☐ Unknown	Aircraft Explosion ☒ None ☐ Both Ground and In-Flight ☐ In-Flight ☐ Fire at Unknown Time ☐ On-Ground ☐ Unknown			
Description of Damage to Aircraft and Other Property <i>(Use additional sheet, if necessary.)</i> Right mlg failure, nose gear, propeller Right wingtip, right main gear well.					
NARRATIVE HISTORY OF FLIGHT <i>(Please type or print in ink.)</i>					
Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.					
Takeoff was on rwy 36 with right pattern East of Oregon Ave with a show pass between rwy 36 and two A. Downwind was On the west side of Oregon. I lowered The landing gear midfield at 120 kts is Turned base abeam the taxiway A threshold Checked GUMP, and set up for landing On Alpha as briefed. Since we were Flying with a somewhat variable tailwind I carried 90 knots down final aiming for touchdown about 2500' down the "runway" while the aircraft ahead was touching down The added airspeed caused a bounce, and a hard touchdown. Upon applying brake I felt a bump, which I thought was a Crack in the pavement, but the right main Tire began squealing and the aircraft turn right sliding sideways onto the grass breaking the nose gear spring strut, and ultimately breaking off the nose gear trunion assy and allowing the propeller to strike the ground damaging all 3 blades The nose wheel tire and spring strut were on the grass with the wheel and spring first then a propeller tip, then the nose gear trunion. Minor damage occurred to the carb airbox and the exhaust tailpipes					
OPERATOR/OWNER SAFETY RECOMMENDATION <i>(How could this accident/incident have been prevented?)</i>					
Operations should be into the prevailing wind, and a go around escape pattern and procedure need to be briefed. This was the 15th time I have flown this procedure, and all previously operated into the wind. I elected to ride out the bounce and hard landing rather than go around because I was not certain I could clear the decelerating aircraft ahead with the distance available and the tailwind.					

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on a separate sheet.)Was there Mechanical Malfunction/Failure? ☐ Yes ☒ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)
