Aircraft Explosion

- ☒ None ☐ Both Ground and In-Flight
☐ In-Flight ☐ Fire at Unknown Time
☐ On-Ground ☐ Unknown

Description of Damage to Aircraft and Other Property *(Use additional sheet, if necessary.)*

Prop strike under full power. Substantial damage to propeller and engine. Substantial damage to right wing. Right main gear leg folded under fuselage. Left wing appeared undamaged. Cockpit and surrounding fuselage minor damage. Substantial damage to empennage. Less than an acre of field crop damage where the aircraft contacted the crop that surrounds the airstrip.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink.)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

The planned departure was from a private rural grass airstrip one mile southeast of Hartsburg Illinois along Rt 121. The aircraft was configured for aerial liquid spray operations of agricultural crop protection products and the planned flight was the first flight of the day from this location and planned to return after this flight. The pilot flew the previous week out of this location and was familiar with the airstrip and surrounding environment. Preceding the day of these events the region received rainfall causing the airstrip to be softer. The grass was also taller than when the pilot had previously worked off this strip. At the time of takeoff there was a breeze from the south east. Typical operations from this airstrip are for a takeoff to the north west. The pilot was aware of the conditions of softer ground, taller grass, and tailwind when considering the quantity of fuel and product to be loaded onboard the aircraft. The aircraft has a total fuel capacity of 160 gallons and product hopper capacity of 400 gallons. The pilot filled before the planned takeoff and had onboard 120 gallons of fuel and 300 gallons of product. During the initial takeoff roll all engine indications were normal. There were no performance abnormalities observed and the pilot was confident the takeoff would be successful. The aircraft achieved liftoff, but soon after began to sink and came into contact with the surrounding field crop while exiting the departure end of the strip. The crop offered sufficient resistance to arrest the aircraft. Once at rest, the pilot switched off fuel and electrical power, removed his helmet and harness, and then vacated the aircraft uninjured.

OPERATOR/OWNER SAFETY RECOMMENDATION *(How could this accident/incident have been prevented?)*

Decision to not make the flight.

Improved judgement over adjustments needed for changing conditons. Test out new conditons with reduced aircraft weight.

Consult other pilots and ground crew regarding takeoff conditons.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on a separate sheet.)Was there Mechanical Malfunction/Failure? ☐ Yes ☒ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)
