Subject: Helicopter accident involving N432TV on 7/27/2025

Contact: John Britton (Pilot)

Spoke with pilot. He said that there was nothing wrong with the helicopter. He said that he was spraying a 300-acre field adjacent to where the accident happened. He said that he had already made about 10 passes on the field and was coming back to land at the nurse truck to get more chemical. He said that he was unaware that the guy driving the nurse truck had moved the truck about 50 ft. closer to the wires and did not inform the pilot that the truck was moved. Without knowing this, he made an approach to the truck as he had done previously and saw the wires too late to avoid them. The helicopter struck the wires, and he then landed on the road.

I obtained further information from him regarding his pilot certificates and obtained his e-mail address and informed him I would be sending him a report form to complete.
