Description of Damage to Aircraft and Other Property *(Use additional sheet, if necessary.)*

Both right and left spars damaged.
 left gear damaged
 windshield busted
 fuel sump leaking

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink.)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

See Attached info on email

OPERATOR/OWNER SAFETY RECOMMENDATION *(How could this accident/incident have been prevented?)*

As a flight instructor i belive this accident could have been prevented if it were possibly a touch and go instead of a intended full stop. A full stop was planned due to my instruction to take off of runway 13 on the next performance takeoff.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on a separate sheet.)Was there Mechanical Malfunction/Failure? ☐ Yes ☒ No

Mr. Lessley,

Your completed 6120.1 accident report was not attached to the email (below).

As discussed on the phone, I will include this email as your typed narrative associated with your completed 6120.1 accident report.

Sincerely,
Andrew Todd Fox
NTSB, Senior Aviation Accident Investigator

Subject: Re: FW: CEN25LA299 (Grenada, Mississippi) - Piper J5A (N35025) - NTSB Accident Report Form

KGNF (7-23-25)

On July 23, 2025 at Grenada municipal airport I Gavin Lessley was conducting flight training with my student Samford Bennet in his Piper J5 cruiser. We followed normal procedures prior to our flight including pre flight of the aircraft and a weather briefing. (KGNF temporarily unavailable). We started the engine at 7:10am and began our taxi towards runway 31. As we reached the hold short line at runway 31 my student performed a usual run up which consisted of flight controls, magneto checks, and carb heat check. I then instructed my student to talk me thru a short field takeoff and perform the task as well. My student was able to show excellent performance during the takeoff. As the flight continued we did several performance takeoff and landings to a full stop. As we were coming in for the 7 landing with the winds as calm as ever I planned on re routing our departure to runway 13 so my student could see his approach from a different point of view. As we touched down with around 1500ft of runway remaining the airplane took a 60 degree turn towards the left and immediately the controls were changed. During the exchange of the controls the plane quickly kicked back to the right 90 degrees off the runway into the grass between the 1000ft sign and hay bolls. As an instructor I had to make a decision. So with what I thought was sufficient airspeed 35-40mph, a narrow path, and 200 plus yards between the aircraft and a chain link fence I pushed the throttle open. I'm not certain but about 50-65 yards prior to the fence the grass was waist high which I believe killed what lift we had. As I realized we were not going to clear the fence I pulled the power to idle as we struck the fence and rolled in the bean field at approximately 8:15am. My student and I both stepped out of the aircraft as we smelt a strong odor of fuel. We then walked back towards the hangar as I called the Rock.
