Description of Damage to Aircraft and Other Property <i>(Use additional sheet, if necessary.)</i> Damage to LH horizontal stabilizer, LH elevator, LH wing strut.					
NARRATIVE HISTORY OF FLIGHT <i>(Please type or print in ink.)</i>					
Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.					
Arrived at Joliet Regional airport (JOT) at 12:30 CST to fuel and set up banner for pick up at 3:30 CST. Fuelled at self serve, preflighted, and took off at 3:15 to pick up banner scheduled to drop three hours later at JOT at 6:30 CST. Flew with banner around the North side of Lewis University's airport to Shorewood, Plainfield, Naperville, Woodridge, Bolingbrook, and Romeoville maintaining 1100 feet AGL. Approximately 5 minutes after circling "shopping center" 4 miles west of Lewis University (LOT) I obtained a frequency change approval and exited the class D airspace to the South. 1 mile south of LOT airspace I heard a very loud bang and strong vibrations emanating from the engine. I immediately advanced to full power suspecting a blown cylinder and pushed the mixture plunger to full rich, noting the position of the fuel selector to "BOTH" and that all engine instruments were normal. I turned towards JOT attempting to make it to the airport under partial power with the banner still attached to the aircraft, and transmitted to LOT Tower I had a complete engine failure. LOT Tower said emergency services are on the way and requested souls on board and fuel remaining. I responded with 1 soul on board and approximately 3 hours endurance. 5 seconds after transmitting the partial engine power was lost to a full engine failure and a windmilling prop with few vibrations. Out my left window I chose a soccer field followed by a golf course as there were variable light winds present. On the dive towards the soccer field roughly 300 feet AGL maintaining 45 mph heading 210 I concluded the aircraft would touch short of the empty soccer field and into an apartment neighborhood with the banner still attached, and elected to release the banner. Upon releasing the banner at 100-200 feet AGL the aircraft had too little drag to stop in time for a fence in the Southwest corner of the lot with a road behind it, so I reduced throttle to idle, pulled full flaps, and induced a forward slip until just before roundout. The aircraft bounced in the middle of the field, and touched again with full brakes causing a ground loop to the right, sliding the aircraft sideways into the steel wire fence at approximately 15 mph. The impact with the fence caused damage to the left elevator, denting to the rear and forward left wing struts, left wingtip, and left main gear leg. I immediately shut power down to the aircraft, moved the fuel selector to "OFF", pulled mixture to idle cutoff and exited the aircraft. Joliet Police officers and the Joliet Fire Department were shortly on scene following touchdown.
