Description of Damage to Aircraft and Other Property *(Use additional sheet, if necessary.)*

Both wings and tail hit the ground on impact. Nose landing gear tore off on the impact. Right wheel fairing broke off during impact. All 3 prop blades bent. Engine fairing cracked. Left wing tip completely cracked. Bottom of tail/rudder cracked.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink.)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Arrived at the airport at approx 12:30pm. The plan was to do (3) landings and takeoffs with the instructor and if those were executed properly and we felt comfortable I was going to do (3) take offs and landings solo. We did the (3) landings together without any issue or concern, I was able to execute the first two solo without issue. On the third setup I sent up a normal approach and followed the glide path down. Crossed the threshold @ around 82-84knots with full flaps until I got over the numbers I went power idle. The plane began to float as normally would and I started getting pushed to the left side of the runway, tried to correct with the rudder and couldn't maintain the center line and was worried I would land off the left side of the run way. I induced full power, pulled up on the side stick and the plane shot to the left and struck the field with the left wing, nose diving the plane into the dirt.

OPERATOR/OWNER SAFETY RECOMMENDATION *(How could this accident/incident have been prevented?)*

I should've applied more right rudder when full power was induced on the go around.
