Description of Damage to Aircraft and Other Property *(Use additional sheet, if necessary.)*

Right landing gear , Propeller cowling canopy, Outer 2 foot of left leading edge of wing and wingtip, vertical stabilizer, and rudder

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink.)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Flying back from Pueblo after topping off with fuel normal takeoff was at about 10 AM mountain standard time from Pueblo at the time Pueblo winds were light and variable, and this was pretty consistent along the entire Front Range of Colorado with the forecast to remain the same for most of the day. I was still performing phase 1 flight testing per EAA flight test program. When I got to my home airfield and residence. I conducted a normal base and left hand turn to final. The approach to landing runway 23, left side of runway, due to favorable grass conditions .. the approach was flown using stabilized approach criteria at about 75 knts. Upon crossing threshold, reducing speed to approximately 63 knts, normal touchdown was achieved for a 2 point wheel landing. During the touchdown, I heard a thunk which I believe was the right wheel and axle separating from the right landing gear. Airplane continued to track for about 35 feet before the exposed landing gear strut dug into the ground and dirt causing the aircraft to veer slightly right and to flip on its back and slide approximately another 50ft. I extricated myself from the aircraft and waited for EMTs and fire department to show. There was no fire. I went to the local ER to be checked out by medical professionals. No bones were broken was conscious through entire event and am recovering back to normal health.

Jim McKinstry

OPERATOR/OWNER SAFETY RECOMMENDATION *(How could this accident/incident have been prevented?)*

believe that a sturdier axle mount and larger hardware may have prevented this from happening .

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on a separate sheet.)Was there Mechanical Malfunction/Failure? ☒ Yes ☐ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)

Other Services, if any, prior to departure:

Checked oil and did sumped fuel and did thorough walk around before departing Pueblo

EVACUATION OF AIRCRAFTWas an emergency evacuation of the aircraft performed? ☒ Yes ☐ No

Method of Exit – Describe how the occupants exited and how many occupants evacuated each location:

Once airplane came to rest, removed, parachute removed five point harness turned off avionics master and magnetos, and tried to expedite out of airplane had to use fist to break plexiglass and crawl out of small hole underneath the aft, roll cage, and portion of the cockpit

OTHER AIRCRAFT – COLLISION (If air or ground collision occurred, complete this section for other aircraft.)
