

NATIONAL TRANSPORTATION SAFETY BOARD PILOT/OPERATOR AIRCRAFT ACCIDENT/INCIDENT REPORT

This form to be used for reporting civil and public aircraft accidents and incidents

BASIC INFORMATION

Accident/Incident Location

Nearest City/Place: Erie State: CO

ZIP: 80516 Country: Boulder

Latitude: _____ Longitude: _____

(Enter in decimal degrees or degrees:minutes:seconds)

Accident/Incident Date/Time

Date: 08/18/2005 Local Time: 3 25
mm/dd/yyyy

Time Zone: MST

Collision with Other Aircraft: ☐ Midair ☐ On-ground ☒ None

AIRCRAFT INFORMATION

Registration Number: N593TT

Manufacturer: JMB

Model: VL3

Serial Number: _____

Year of Manufacture: _____

Amateur-Built: ☐ Yes ☐ No If Yes: ☐ Kit/Plans ☐ Original Design Make: _____

- ☐ IFR-Equipped and Certified
☐ Commercial Space Flight
☐ Unmanned Aircraft

Maximum Gross Weight: _____ lbs

Weight at Time of Accident/Incident: _____ lbs

Number of Seats: _____ Flight Crew Seats: _____

Cabin Crew Seats: _____ Passenger Seats: _____

Number of Engines: _____

Category of Aircraft

Accident Narrative for NTSB Report

Aircraft: N593TT

Date: August 18, 2025

Location: Erie Municipal Airport (KEIK), Erie, Colorado

Injuries: None reported

Flight Type: Instructional – Commercial Cross-Country Training Flight

History of Flight

The flight departed Erie Municipal Airport (KEIK) at approximately 0606 MST en route to Rapid City Regional Airport (KRAP), South Dakota, as part of a commercial pilot cross-country training flight. The commercial student was the pilot flying under the supervision of a certified flight instructor (CFI).

The flight to KRAP was uneventful. After landing, we secured the aircraft, had breakfast, and refueled in preparation for the return flight. Prior to departure, we observed developing weather over the mountains and potential activity west of Erie. We agreed to monitor conditions and divert as necessary.

We departed KRAP with radar vectors toward Mount Rushmore, performed a visual flight near Mount Rushmore and Crazy Horse, and continued toward Custer County Airport (KCUT) before proceeding toward Cheyenne Regional Airport (KCYS). En route, we observed cumulus clouds building west of KCYS, both visually and on radar, and elected to divert east toward Torrington Municipal Airport (KTOR) as a precaution.

A touch-and-go landing was performed at KTOR before proceeding toward Kimball Municipal Airport (KIBM). Weather remained favorable, so we continued the flight toward Greeley–Weld County Airport (KGXY) as the next possible divert if weather dictated a divert was necessary. Observations indicated clear conditions over Loveland (KFNL), prompting the decision to continue to KFNL for a full-stop landing and weather evaluation.

At KFNL, the aircraft was shut down and secured while we took a break and rechecked weather conditions. Although weather was building west and south of Erie, conditions over KEIK remained clear. With multiple aircraft operating in the practice area between

KFNL and KEIK and given it was a short 12-minute flight, we elected to return to Erie, designating Longmont (KLMO) and Boulder (KBDU) as alternate diversion airports.

During pre-departure checks at KFNL, we noted an unusual sound from the fuel pump and fluctuating fuel pressure below acceptable levels. The pressure increased with the auxiliary pump and decreased thereafter. The aircraft's owner was consulted and advised that this behavior was typical under warm conditions, and the flight could proceed.

The aircraft departed KFNL at approximately 1455 MST. En route, we encountered moderate turbulence. Approximately 10 nautical miles from KEIK, we obtained AWOS information reporting winds from 220 degrees. A brief discussion regarding runway selection concluded with a decision to land on Runway 16 due to gusty conditions. With no other traffic in the pattern, the CFI recommended a straight-in approach to Runway 16 as he was anxious to get on the ground.

At approximately 1,000 feet AGL, turbulence intensified, prompting me to disengage the autopilot and continue manually. The PAPI was activated for visual guidance, and the approach was flown at 60–65 knots, maintaining a stable glidepath. At 400 feet AGL, a rapid sink rate was encountered; I added power to regain the glide slope.

While crossing the threshold, reduced power to idle and initiated the flare. A gust of wind lifted the aircraft, causing momentary instability. I called "go around" and applied full power. Simultaneously, Jackson pulled aft on the control stick, possibly to assist in landing. No positive exchange of controls occurred, leading to potential confusion over control inputs. The aircraft's nose pitched up abruptly, resulting in a tail strike, aerodynamic stall, and right-wing drop. The aircraft impacted the ground and veered off the right side of the runway.

DAMAGE TO AIRCRAFT AND OTHER PROPERTY**Aircraft Damage**

- ☐ None ☒ Substantial
☐ Minor ☐ Destroyed
 ☐ Unknown

Aircraft Fire

- ☒ None ☐ Both Ground and In-Flight
☐ In-Flight ☐ Fire at Unknown Time
☐ On-Ground ☐ Unknown

Aircraft Explosion

- ☒ None ☐ Both Ground and In-Flight
☐ In-Flight ☐ Explosion at Unknown Time
☐ On-Ground ☐ Unknown

Description of Damage to Aircraft and Other Property (Use additional sheet if necessary)

prop strike
landing gear collapsed

NARRATIVE HISTORY OF FLIGHT (Please type or print in ink)

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)

Was there Mechanical Malfunction/Failure? ☐ Yes ☐ No
(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)
