☐ In-Flight ☐ Fire at Unknown Time
☐ On-Ground ☐ Unknown

Description of Damage to Aircraft and Other Property *(Use additional sheet, if necessary.)*

Power plant substantial damage, Propeller substantial damaged, Left wing substantial damage, Left landing gear separated from airplane, Fuselage minor damage

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink.)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

I arrived at the field with about 30 gallons of product left in the hopper. Since i've never sprayed this field before, I made several recon circles at about 200 feet AGL. I noted it was tight and more difficult than the previous fields. It was pie-shaped with a tree row and powerlines running northwest/southeast. The powerlines ran the entire length of the field, and the tree row was about half the field length. I decided it would be logical to spray the section east of the tree row first and separately from the west portion of the field. I started on the very east side of the field with passes directly north and south. After about 8 passes, I flew to NA60 to refill with product. I returned to the field and completed the North and South passes on the east side of the tree row, approximately 32 passes. I then sprayed 4 passes west of the tree row, on a heading parallel to the tree row. I then flew a clean-up pass up against the east side of the tree row. With about 5 gallons of product left, I began a pass on the north edge of the field headed west. As I approached the tree row, I began a slight climbing right turn with the plan to exit the field when the wires became visible. At this moment the bottom wire was below my head. Immediately pushed the stick full forward with the left aileron, to go underneath and miss the wire. I attempted to pull back, shortly after I impacted the ground. After impact, I felt the airplane turn 180 degrees with a rise in the tail. At approximately 0935 me and the aircraft came to rest about 100 yards from the initial spot of impact.

OPERATOR/OWNER SAFETY RECOMMENDATION *(How could this accident/incident have been prevented?)*

- Make it a habit to survey the field multiple times, especially before starting any clean up passes
- Write out all obstructions on the map in pen before starting the application
- Know exactly how I am going to execute the pass before entering it
- Maintain a constant scan, do not become fixated on one obstacle

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on a separate sheet.)Was there Mechanical Malfunction/Failure? ☐ Yes ☒ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)
