Description of Damage to Aircraft and Other Property (Use additional sheet, if necessary.)

Bent aircraft propeller, bent wings, flaps, and ailerons, tail detached from aircraft, both main gear destroyed, multiple holes punctured in fuselage.

Knocked over metal fence, destroyed fence post.

NARRATIVE HISTORY OF FLIGHT (Please type or print in ink.)

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Elliot and I departed from Camden, Arkansas after a short break for fuel and to stretch our legs. Elliot fueled N2500Q to full tanks while I double checked our oil level, route, and weather for the flight back to Lancaster, Texas. We departed the airport, and began heading north to avoid some potential precipitation I saw on my ForeFlight EFB radar. We climbed to our cruising altitude, set cruise power, and adjusted the mixture to lean of peak. After we had fully avoided the potential precipitation build up, I turned the aircraft to a westerly heading for Lancaster Airport, KLNC. The entirety of the flight was completely normal, no indications out of the ordinary. As we approached the Dallas bravo airspace, I initiated a steady descent to 2,000' MSL, an altitude high enough to remain clear above of the Mesquite Delta airspace, as well as below the DFW bravo shelf. At this point, I was monitoring Guard. A few miles into the bravo, once I was plenty clear of Mesquite's Delta airspace, I began a descent to 1,500' MSL, and prepared to land at KLNC. I switched to Lancasters Unicom frequency, and was preparing to make a call, entering at a 45 degree entry into the left downwind for runway 13. Suddenly, the RPM dropped to zero, and the cockpit fell silent. I quickly applied full power, and pulled my carb heat. The engine remained idle. At this point, I switched back to 121.5 on the radio, which was still in the standby frequency, and instructed Elliot to pitch the aircraft to best glide. I ran through the remaining checklist items I could think of while Elliot configured the aircraft for an emergency landing. On 121.5, I declared an emergency, and asked what areas around me were suitable to land in. Dallas approach informed me of a highway at our 12 o' clock that would be our best bet. As we were set up on a sort of left base for this highway, our landing light illuminated a field immediately below us. I was extremely relieved to see a spot to land that wasn't full of other vehicles speeding on it. At this point, I instructed Elliot to help me get the plane down, as we were still 200' above the ground to my best guess. I was controlling the aircraft at this point, while Elliot put the flaps down. We touched down roughly half way down the field, and due to our high energy and the unevenness of the field, we bounced back into the air multiple times. As the aircraft settled on the ground, I put every bit of force that I could into the toe brakes. Unfortunately, due to the speed of the aircraft, we weren't able to stop it in time and collided with the fence at the end of the field. After the aircraft had come to rest, I immediately turned off the master, disengaged the magnetos, and ensured both the throttle and mixture were fully cut off. Elliot was inspecting both himself and me to ensure there were no injuries that we didn't notice. Finally, we climbed out of the aircraft, and gathered our belongings.
