Description of Damage to Aircraft and Other Property *(Use additional sheet, if necessary.)*

Aircraft has front landing gear damage, vertical tail damaged, and fuselage has dents, scatches and small holes all throughout.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink.)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

1. Pre-Flight Preparation: At around 1315 Local time, my student Michael McCrary and I were discussing the route for our Cross Country which was going to serve as his Instrument Aeronautical Experience 250NM XC requirement. The weather briefing indicated good conditions and the plane had just come back from a training flight with another CFI, him and his student topped off the airplane, knowing that Mike and I were going on a XC flight. Mike started the preflight and I joined him shortly after and verified we were good to go. We started the airplane and completed the run up before Mike called DSM ATC to obtain our clearance.

2. Flight Details: We departed Winterset 3Y3 at around 1345 and headed towards KALO for a VOR approach into runway 12. We completed the approach and started our leg from KALO to KFOD in order to do an ILS approach. Some time between KALO and KFOD, Minneapolis center lost radar contact with us but they later regained it upon cycling the transponder. As we got closer to KFOD, radar contact was again lost so we were told we could not do the ILS approach without doing the whole procedure starting at the Mason City VOR. We declined as we did not have enough time to come back to 3Y3 for the next scheduled flight. We were cleared then for the RNAV 06 approach into KFOD, we completed the approach with a touch and go and then got cleared to go back to 3Y3. Shortly after being transferred to DSM Approach, they regained radar contact and cleared us direct to ZIKUP IAF for the RNAV 14 back at 3Y3. As we joined the approach, the left tank indicator was showing empty and the right tank was indicating about 1/4. Throughout our flight, Mike properly leaned the picture during our cruising legs and the fuel flow indicator was showing about 6 gallons an hour average consumption. Mike kept the RPMs at roughly 21-2200 and our Indicated airspeed was just over 100Kts.

3. Incident Description: At about 6 miles out from runway 14, I felt a reduction in power which I thought was Mike reducing power to lower the aircraft's altitude but he shortly proceeded to tell me he had lost power. I took over the controls, looked around the area and saw many fields with crops but one dirt field to our right that I immediately chose as our point of landing. As we were gliding down, we attempted to restart the engine and for a brief 2 seconds it did but went out again. I then focused on the approach and proceeded to extend flaps to get the airplane to slow down so the impact and groundspeed would be minimal on touchdown. I touched down with a soft field technique but as soon as the wheels touched, the plane flipped over forward. We unbuckled and exited the airplane.

OPERATOR/OWNER SAFETY RECOMMENDATION *(How could this accident/incident have been prevented?)*

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on a separate sheet.)Was there Mechanical Malfunction/Failure? ☐ Yes ☐ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)

It is suspected to be fuel related. The plane has over 500 nautical miles of range at full fuel and this flight was roughly 270, however, at the time of the incident the left tank was showing empty but the right tank still had just under 1/4 of a full tank. Uncertain about mechanical failure.
