10/1/25 C47 Runway 18 Tail Strike Dual flight with [REDACTED] [REDACTED] and I took off from KMSN and proceeded north to C47(Portage). This happened roughly around 10:30am. We got weather information from KDLL. The wind was light from 130 so we chose 18. He originally entered the left downwind a little close and we corrected outward. [REDACTED] added 50% flaps in the downwind at roughly 90-100 kts. He turned base and added 100% flaps. [REDACTED] turned final and was approaching at 80 kts attempting a short field landing on the numbers. As he was descending, he was trying to slow down for the short field. On short final he had reached just above 70 kts. I saw the nose come up a bit and the speed slowed. I called "go around, go, go!" and reached to help push power in but he was already doing it. We still touched down on the runway shortly beyond the numbers and we were back in the air. We came around in the pattern without incident and decided to stop and inspect. It seemed like we touched down on the mains, and I looked at the mains and everything appeared fine. I did not inspect the tail at the time as it felt like we had just touched down on the mains. When we returned to Madison, I went to tie down the tail, realized the damage, and reported it. Going forward, I will plan on going around anytime a student is still working to achieve the appropriate airspeed before short final. If any incidents of a questionable landing were to happen, I would shut down and perform a full inspection instead of only inspecting what I thought may have been affected.
