Description of Damage to Aircraft and Other Property *(Use additional sheet, if necessary.)*

Leading edge of the left and right wing were damaged, upon impact to the trailer. No sign of damage on the trailers have been found.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink.)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

The accident happened on final on runway 36R at the GHSA-Wallist Gliderport (TE71). By the end of my local flight back to the airport, wind was about 9 knots from the east(090), which is within the documented maximum crosswind capability of the glider (11kts).

With the intention of landing long on runway 36R, my plan was to stop towards the north end of the field between the hangar and the plowed field. On Final leg, I was crabbed into the wind to line myself straight down the middle of the runway with airbrakes about 1/4 to 1/2 open and speed approximating 55 kts. Recommended landing speed is set to 50 kts, which was further adjusted for wind.

About 10 feet or less off the ground, I decided to close the air brakes and let the ground effect take me closer towards my touchdown point. As I slowly lost the energy from the ground effect, I straightened out and opened minimal airbrakes to keep glider rolling on the ground post touchdown point. As I was rolling on the ground, I closed the airbrakes to keep the ground roll going longer and started focusing on rudder control for steering.

Going past the first few trailers on the left, I noticed myself getting closer to the plowed field and pushed in full left rudder to avoid going towards the plowed dirt field. Along with the left rudder, I also lowered the left wing, inadvertently, likely dragging it to the ground, but do not recall the wings touching the ground. Within a few seconds, the glider started making a sharp turn to the left and I pushed in the right rudder and ailerons immediately to counteract. I was moving towards the trailers at this point and accident felt inevitable. I opened the airbrakes all the way to reduce impact. Wheel brakes were operational but not used as everything happened so fast.

Terrain: flat grass strip

Flight time: 1:14pm - 4:16pm

Location: GHSA-Wallis Glideport (TE71)

Destination: GHSA-Wallis Glideport (TE71)

Runway: 36R

Illness: None

Medications: None

Stressed: Not Stressed

Alcohol: N/A - Don't drink

Fatigue: Even though this was a 3 hour flight, I was not fatigued

Emotion: I was feeling normal

OPERATOR/OWNER SAFETY RECOMMENDATION *(How could this accident/incident have been prevented?)*

The pilot should not have performed an extended landing and ground roll maneuver in a crosswind that was close to the maximum demonstrated crosswind component of the glider. Aircraft should be landed and stopped quickly in crosswind situations.

In a glider ground roll the wings need to be kept completely level at all times to prevent ground loops from occurring. When landing in a crosswind, the pilot should anticipate the lifting effect a significant crosswind will have on the upwind wing and be prepared to counter this with additional aileron to maintain a wings-level attitude. Likewise, the pilot should anticipate the weathervane effect that will pivot the nose toward the wind and be prepared to add downwind rudder for directional control as the glider slows. Additionally, using full airbrakes, appropriate wheel braking, and aft stick after touchdown will shorten the ground roll and provide extra directional control due to the friction caused by dragging the tail skid.

Ground roll of the glider at this airport should not be extended past the runway displaced threshold into hangar and trailer areas. This area should be for glider ground handling only, with wing walkers on both wings on a windy day.

Pilot of the accident aircraft will receive additional ground, flight, and judgement training by CFI-Gs at this facility.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on a separate sheet.)Was there Mechanical Malfunction/Failure? ☐ Yes ☒ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)

N/A

FUEL & SERVICES INFORMATION

Fuel on Board at Last Takeoff

(Convert from pounds, as necessary)

_____ Gallons

Fuel Type

☐ 100 Low Lead☐ Automotive☐ Jet A☐ Jet A-1☐ Unleaded AV☐ Other, specify _____

Other Services, if any, prior to departure:

EVACUATION OF AIRCRAFTWas an emergency evacuation of the aircraft performed? ☐ Yes ☒ No

Method of Exit – Describe how the occupants exited and how many occupants evacuated each location:

Pilot's exit was not affected. Normal exit was made by opening the canopy and exiting the glider

OTHER AIRCRAFT – COLLISION (If air or ground collision occurred, complete this section for other aircraft.)

Aircraft Registration Number

N/A

Manufacturer: _____

Model: _____

Damage to Other Aircraft:

☐ Destroyed☐ Substantial☐ Minor☐ None

Registered Owner of Other Aircraft

Name: _____
