Description of Damage to Aircraft and Other Property (Use additional sheet, if necessary.)

Damage to the belly of the airplane, to my knowledge only to the skin.
 Damage to the axhaust
 Prop strike damage
 Left wing damage.
 Left wheel/gear

NARRATIVE HISTORY OF FLIGHT (Please type or print in ink.)

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

This narrative details an incident that occurred on October 19, 2025, during a flight from KGPB to KEAU with my daughter [REDACTED] as a passenger.

We were traveling for a college visit. I departed KGPB at approximately 2:00 PM. I requested flight following from KMCI departure and was subsequently handed off to Des Moines (123.9), Waterloo (118.9), and Minneapolis (125.3). My flight level was 5,500 ft, and winds were from 290 at 23-32 knots. The flight was uneventful. Upon my approach, I obtained a weather briefing from 126.025, which indicated winds from 300.

Approximately 12 miles south of KEAU, I terminated flight following and contacted the Tower on 118.75 with information "G". The Tower instructed me to enter a left downwind for runway 22. My pattern altitude was 2,000 ft AGL. As I crossed the threshold, I went through my checklist and planned for a slip approach for runway 22 due to crosswinds. I received clearance to land on 22. I toggled the gear switch down and felt the gears moving through my pedals (like grinding bump), but I did not confirm the gear down light. At this point, I was concentrating on the crosswind and turning into the wind on my base turn. I had my lights on, fuel pump on, and the first notch of flaps extended. On the left base, I extended the second notch of flaps. On the final approach, I aligned the plane for a slip landing with the runway 22. My final approach speed just before touchdown was approximately 75 knots.

As I approached landing at about 100 to 150 ft above ground, I heard tower communicating with another pilot. During this time, I heard a faint audible alarm, which I had never heard before, and I attributed it to the ongoing conversation between the Tower and the other pilot. I had the throttle all the way out and was under ground effect. I felt a bump and plane lift off again i figured due to strong cross wind. As i descended realized I was unusually low and did not hear the gear touch down. At this point, I remember looking at my speed, which was about 56 knots. I considered a go-around, but I was too low and did not have enough power to accomplish it. Again, I did not check the gear switch light. I instructed my daughter to brace herself, and I flared to slow down more, resulting in a belly landing. The plane skidded a very short distance. I attempted to use my pedals/rudder to change the direction of the slide, eventually sliding into the grass. I immediately turned off all power, shut off the fuel valve, and exited the plane. There was no smoke or fuel leak. The left-side gear was partially down and not inside the wheel well.

post accident inspection by the local crew indicated that gear switch was indeed in a down position, and wheels were partially out of the wheel well as seen in pictures. they were not able to lower the wheels other than using an manual process.

**OPERATOR/OWNER SAFETY RECOMMENDATION** (How could this accident/incident have been prevented?)

I think if I had checked the light for gear down postion that would allow me to take a different action like manually lowering the gear.
 I am not sure what exactly happen, if the wheels just did not come down all the way, If they collapsed, or just did not come down.
 But, had i known I would have used a manual process. Also, would have paid attention to audible alarm which I have never heard before.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on a separate sheet.)Was there Mechanical Malfunction/Failure? ☐ Yes ☐ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)
