Description of Damage to Aircraft and Other Property *(Use additional sheet, if necessary.)*

Horizontal Stabilizer has sustained large dent to leading edge and rippling across stabilizer only on right side. No other damage observed.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink.)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

At between 18:00-19:00 Local time, at KGTG, I was acting as PIC on final approach to runway 12. It was night with overcast skies and the KGTG airport lighting was very dim. The runway's surrounding areas were not illuminated. When I initiated a flare to land my strobe light on my right wing briefly illuminated a deer which was running from right of the runway directly towards the runway and my path (running forward and to the left). The deer was directly off my wing within 5 feet of my wingtip by my estimate. I immediately initiated a go around avoiding a head on collision. Unfortunately, the deer struck my right horizontal stabilizer. I was unaware of where the deer had struck and felt a bump below and behind me. While on my go around I observed a reduced climb performance and right yaw however the aircraft remained controllable. I thought about returning to land at KGTG however, I now suspected there may be more deer or a dead deer on the runway surface and lighting at KGTG did not allow me to verify that it was safe. I also was familiar with the nearby KRZN airport and knew they would have better lighting, maintenance on the field and police nearby that could help if needed. I was unaware of the extent of damage sustained and wished to go somewhere that I would be safest to land and chose to divert to KRZN. I was on an IFR flight plan and notified ATC that I had a deer strike and requested to divert to KRZN. ATC granted this request and I flew to KRZN and safely landed. After landing I was able to observe that the damage sustained was to my horizontal stabilizer and nowhere else.

OPERATOR/OWNER SAFETY RECOMMENDATION *(How could this accident/incident have been prevented?)*

Brighter/ more lighting at airport and presence of fences to keep out wildlife.
