

NATIONAL TRANSPORTATION SAFETY BOARD • PILOT/OPERATOR AIRCRAFT ACCIDENT/INCIDENT
REPORT Use this form (Form 6120.1) to report civil and public aircraft accidents and incidents

BASIC INFORMATION
Accident/Incident Location

 Nearest City/Place: Sheboygan Falls State: WI

 ZIP: 53085 Country: USA

 Latitude: N43deg 46' 06" Longitude: W087deg 51' 09"

(Enter in decimal degrees or degrees:minutes:seconds)

Accident/Incident Date/Time

 Date: 11/12/2025 Local Time: 20:35
 mm/dd/yyyy HH:MM

 Time Zone: CST

 Collision with Other Aircraft: ☐ Midair ☐ On-ground ☒ None

AIRCRAFT INFORMATION

 Registration Number: N94342

 Manufacturer: Engineering Research

 Model: 415C

 Serial Number: 1565

 Year of Manufacture: 1,946

 Amateur-Built: ☐ Yes ☒ No If Yes: ☐ Original Design ☐ Kit/Plans

Make: _____

- ☐
- IFR-Equipped and Certified
-
- ☐
- Commercial Space Flight
-
- ☐
- Unmanned Aircraft

 Maximum Gross Weight: 1,260 lbs.

 Weight at Time of Accident/Incident: 1,225 lbs.

 Number of Seats: 2 Flight Crew Seats: 2

 Cabin Crew Seats: 0 Passenger Seats: 0

 Number of Engines: 1
Category of Aircraft

Description of Damage to Aircraft and Other Property (Use additional sheet, if necessary.)

No property damage other than the aircraft.

Aircraft Main spar bent.

R fuselage wrinkled

R fuselage to wing stub upper and lower surfaces wrinkled.

Engine mount bent

NARRATIVE HISTORY OF FLIGHT (Please type or print in ink.)

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

The procedure for power loss just after takeoff while climbing at best rate of climb, 66 mph indicated, had been demonstrated to the student and practiced, under cfi supervision, by the student at altitude and on takeoff several times in the past during the daytime. The importance of being prepared for power loss on every take off is emphasized and included on the pre takeoff check list. A couple of night takeoff and landing cycles had been completed successfully by the student on this night training flight. On the 3rd takeoff at an airspeed of 66 mph and at about 100' AGL, I announced, "simulated engine failure, pulled carb heat on and throttle to idle. The student responded slowly to the nose down attitude required in this event. Airspeed was decaying. I advised I was taking the controls and announced I would demonstrate the required promptness of pitch change to address a power loss. I established a full power climb at 66 MPH and at about 100' AGL pulled carb heat on, throttle to idle, announced engine failure and promptly lowered the nose to the 75 attitudes using the attitude indicator. Airspeed was building from about 55 MPH but not fast enough to prevent a hard landing. I pushed the throttle full in, carb heat off. The engine hesitated. I pitched the aircraft to a level attitude using almost full up elevator control, the engine developed full power. Airspeed was insufficient with available elevator control to arrest the rate of decent. A hard landing resulted. A stall did not occur. Other factors. Trees and elevated terrain, 1,500' west of the flare point probably blocked landing headwinds decreasing airspeed at the time a flare would have been effective in decreasing the rate of decent.

OPERATOR/OWNER SAFETY RECOMMENDATION (How could this accident/incident have been prevented?)

For this demonstration, I failed to:

- > Consider all the hazards.
- > Attain the altitude required to demonstrate, without significant risk, the pitch change from a Vy, takeoff climb attitude, to a power off landing attitude to complete a normal landing in the event of power loss.
- > As an instructor I should have trained and emphasized the importance of knowing what attitude on the attitude indicator is the same as the visual indication for Vy climb and power off landing speed during daylight hours. Also, physical obstructions up wind of a landing point can have a negative impact on airspeed when the aircraft is already at slow speed and close to the ground. It is painfully apparent I did not properly assess all the risks involved in this nighttime simulation, at the altitude I chose. I intend to:
- > Assure students are familiar with the visual and attitude instrument indications for Vy climb and normal landing approach speeds
- > Make adjustments to the ground briefing prior to a night flight emphasizing, at night, the importance of referencing the attitude indicator.
- > Assure the effects of barriers to wind are considered for any takeoff or landing.
- > Assure altitudes are selected for simulations that eliminate most of the risk associated with engine out training.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on a separate sheet.)Was there Mechanical Malfunction/Failure? ☐ Yes ☒ No
