NOTAMS (D and FDC), AIRMETS, SIGMETs, PIREPs in effect at the time of the accident/incident: /KCOS L0074/25: Maintenance work (WIP MAINT) was active on the West Terminal Apron. This notice was effective from 15:02 UTC until 22:00 UTC on November 26. AIRMET Sierra (IFR/Mountain Obscuration): Active for the mountains west of Colorado Springs (including the Sangre de Cristo and San Juan ranges) due to high-level cloud layers and incoming winter moisture. AIRMET Tango (Turbulence): Typical moderate turbulence was forecast above FL180 across the Colorado Rockies due to strong upper-level winds. SIGMETs: No Convective SIGMETs (thunderstorms) were active in the vicinity of KCOS at this time, as the atmosphere was stable with high pressure (30.18 inHg).

Description of Damage to Aircraft and Other Property *(Use additional sheet, if necessary.)*

Left Struts bent, elevator, stabilator, rudder all damaged from hitting a 1000s ft remaining sign. Airframe is twisted, undercarriage of fuselage ripped from hitting a small light.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink.)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

11/26 Got to the hangar around 7:50 am, fueled plane and did preflight actions. Everything was satisfactory, Wheels up around 8:40 AM. Flew from KCOS to KLHX (La Junta) did 2 laps in the pattern and proceeded back to KCOS with the intention of doing a few more laps followed by a full stop. Cleared in to the airspace for a Left Base Runway 17R.

Approach: The approach was very stable, with winds almost in line with the runway, only 10 degrees off. Speed and glide path were very good and this landing felt like it was going to be a great one. As the wheels touched down, a gust from the left lifted my left wing. I corrected with the proper inputs albeit too much, which caused the right wing to come up. At this point i felt it was too unstable and decided to go-around. As I was making the corrections to get the right wing back down i gave it full power and Because of those corrections and newly added energy I veered off to the right of the runway, hit a 1000s ft remaining sign that hit the left struts, elevator, stabilator were all damaged.

Right after hitting the sign I was airborne, the damage had jammed the elevator in a nose up attitude. At this point i Had to push forward with all my strength to keep the plane from stalling. After gaining about 400ft agl i was able to communicate with atc to turn around and land on runway 35L. I was able to land the plane safely, but with the damage already done we veered of to the right again hitting a small light that ripped the fabric of the bottom of the fuselage, then settled in the grass safe and unharmed. I was able to move the plane close to the taxiway to be, shut it down, and towed back to the hangar.

Airport staff showed up Immediately and was ready to help. Thank you KCOS

OPERATOR/OWNER SAFETY RECOMMENDATION *(How could this accident/incident have been prevented?)*

I believe there's a small amount of things i could have done to prevent this and many more for it to have been worse. I believe I could have made my left corrections not as aggressive to not bring the right wing up. Also, i could have waited to get better directional control before initiation the go around. Also i believe if the sign wasn't there, none of this would have happened. But, it did, and i take full responsibility and ownership for the accident.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on a separate sheet.)Was there Mechanical Malfunction/Failure? ☐ Yes ☒ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)
