Description of Damage to Aircraft and Other Property *(Use additional sheet, if necessary.)*

Damage to propellor, spinner, sudden stoppage on engine, left wing tip, left wing strut, right horizontal stabilizer, right elevator.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink.)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

N7276V flew from KVBT to MO32. Upon arrival at the airpark, N7276V crossed mid-field, entered a left traffic pattern for runway 09, did a go-around, and performed left traffic for another approach to landing. The aircraft touched down on the last 500ft of runway with maximum braking at the last 50ft of runway. The aircraft had too much speed and overran the end of the runway, through a ditch, coming to a complete stop just before a barbed wire fence. The propeller struck the ground first, ultimately stopping the aircraft. Due to the abrupt stop of the aircraft, the left wing tip did impact the ground. The aircraft tail impacted the ground upon it's resting position on the right side of the horizontal/elevator. The aircraft rested just off of runway center line, leaning towards the right of the ditch, with the left wing tip extending over the barbed wire fence. All individuals exited the aircraft without injuries. Upon individuals disembarking the aircraft, the aircraft was secured with mixture in the cutoff position, fuel selector in the off position, mags in the off position, and master in the off position. A call was made to local fire & rescue for their arrival. A call was made to the NTSB about the event. Approval to move the aircraft was granted by the NTSB.

OPERATOR/OWNER SAFETY RECOMMENDATION *(How could this accident/incident have been prevented?)*

The accident/incident would have been prevented had the pilot in command decided to perform a go-around due to the unstabilized approach. The accident/incident may also have been prevented had the pilot performed maximum braking at the point of touchdown.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on a separate sheet.)Was there Mechanical Malfunction/Failure? ☐ Yes ☒ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)
