Description of Damage to Aircraft and Other Property (Use additional sheet, if necessary.)

NARRATIVE HISTORY OF FLIGHT (Please type or print in ink.)

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Plane: N1071Z

PIC: [REDACTED]

Date: 02/28/2026 approximately 11:25AM MST

- Started returning from a solo flight to the southeast practice area (Elizabeth practice box), Alt 7,500
- Picked up ATIS before leaving the practice box, ATIS Q Winds 290@7 varying 250-320, Alt 30.04 (from my ScratchPad in EFB), set Alt and G5
- Made a last call on 122.75MHz and left the box
- Switched to KAPA tower (118.9MHz) and made a call approximately 15 miles out
- Tower instructed me to stay out of the Delta as they were busy with another problem
- Performed right-hand standard rate turns just outside of southeast Delta (by the northwest corner of the Three Towers box) to avoid the busy traffic corridor north of the practice areas and waited for tower to call back (still at 7,500)
- Received instructions from tower to follow Parker Rd north for 28
- Replied "unable, student solo" and requested 35
- Received instructions from tower to follow Parker Rd north for a mid-field right Downwind for 35L
- Flew northbound on the east side of Parker Rd and turned westbound around the 28 numbers while descending to pattern altitude
- Joined right Downwind for 35L at pattern altitude
- Received instruction from tower to extend Downwind and they will call Base (monitored other inbound traffic for 35 on ADSB)
- Extended Downwind for a while (flew a little past the power lines)
- Received instruction from tower to turn Base, clear to land 35L
- Turned Base while climbing to approximately 7,000 to account for the rising terrain
- Ran GUMPS
- Turned Final at approximately 85 KIAS and noted 4 whites
- Reduced RPM 1800, flaps 10
- Established glide slope approximately halfway between the power lines and Lincoln (2 whites, 2x reds) and slowed to 80 KIAS, flaps 20
- Remained on glide slope
- A little north of Lincoln, slowed to 70 KIAS, flaps 30
- Aligned with the center line 35L and remained centered (felt some LLWS)
- The comm was very busy so I couldn't call for a wind check. Instead listened intently to other calls for winds, noted 100@7G12 (when I was approximately 100-200 AGL)
- Decided to land with a little extra slope in case LLWS was encountered, remained at 70 KIAS
- I recall hearing tower report winds at 310@7G12 as I started to round-out

OPERATOR/OWNER SAFETY RECOMMENDATION (How could this accident/incident have been prevented?)

CEN26LA133
Denver, CO
N1071Z

Below is the complete Narrative History of Flight. The electronic version of the submitted document has a scrolling feature that allows more text than can be displayed statically when stored in the public docket. This document contains the entire narrative submitted.

NARRATIVE HISTORY OF FLIGHT

Plane: N1071Z

Date: 02/28/2026 approximately 11:25AM MST

- Started returning from a solo flight to the southeast practice area (Elizabeth practice box), Alt 7,500
- Picked up ATIS before leaving the practice box, ATIS Q Winds 290@7 varying 250-320, Alt 30.04 (from my ScratchPad in EFB), set Alt and G5
- Made a last call on 122.75MHz and left the box
- Switched to KAPA tower (118.9MHz) and made a call approximately 15 miles out
- Tower instructed me to stay out of the Delta as they were busy with another problem
- Performed right-hand standard rate turns just outside of southeast Delta (by the northwest corner of the Three Towers box) to avoid the busy traffic corridor north of the practice areas and waited for tower to call back (still at 7,500)
- Received instructions from tower to follow Parker Rd north for 28
- Replied "unable, student solo" and requested 35
- Received instructions from tower to follow Parker Rd north for a mid-field right Downwind for 35L
- Flew northbound on the east side of Parker Rd and turned westbound around the 28 numbers while descending to pattern altitude

- Joined right Downwind for 35L at pattern altitude
- Received instruction from tower to extend Downwind and they will call Base (monitored other inbound traffic for 35 on ADSB)
- Extended Downwind for a while (flew a little past the power lines)
- Received instruction from tower to turn Base, clear to land 35L
- Turned Base while climbing to approximately 7,000 to account for the rising terrain
- Ran GUMPS
- Turned Final at approximately 85 KIAS and noted 4 whites
- Reduced RPM 1800, flaps 10
- Established glide slope approximately halfway between the power lines and Lincoln (2 whites, 2x reds) and slowed to 80 KIAS, flaps 20
- Remained on glide slope
- A little north of Lincoln, slowed to 70 KIAS, flaps 30
- Aligned with the center line 35L and remained centered (felt some LLWS)
- The comm was very busy so I couldn't call for a wind check. Instead listened intently to other calls for winds, noted 100@7G12 (when I was approximately 100-200 AGL)
- Decided to land with a little extra speed in case LLWS was encountered, remained at 70 KIAS
- I recall hearing tower report winds at 310@7G12 as I started to round-out
- Rounded-out and flared, set the plane down approximately 300-400ft (ish) past the threshold
- Focused my sight down the runway to maintain centerline
- The plane rolled for a few seconds on the runway, then airborne again for what seemed to be only a few feet off the runway
- Attempted to bleed off some speed and let the plane settle to the runway again, it did
- The plane went airborne again shortly after, but this time went slightly higher (maybe 7-10 ft off the runway)

- I wasn't sure if I could initiate a go-around that close to the runway and was concerned that retracting the flaps (from 30-20) may result in sinking the plane too quickly to the runway (reduced lift)
- I recalled in recent flight that my CFI advised that if I encounter a windy situation where the plane is just floating down the runway, try to lower the nose a little (reduce the flare) and fly the plane through the wind to set it down. I thought that would be the safest option and did so
- The plane landed hard and flat and then remained on the runway and continued to roll
- I noticed that I was passing B16. I thought about getting off there but was concerned that I may have been going a little too fast for that turn and decided to take B14 instead.
- I gave it a little power to make my way to B14 and get off the runway in a timely manner
- Tower instructed north on Bravo, hold short of 35R at B-12
- Received clearance to cross 35R at B-12 and Alpha into the ramp
- Passed C1 and stopped to perform After-Landing
- Taxied to parking normally

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on a separate sheet.)Was there Mechanical Malfunction/Failure? ☐ Yes ☒ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)
