Description of Damage to Aircraft and Other Property (Use additional sheet, if necessary.)

Engine cowling dented, wings damaged, wingtips/lights damaged, tail and beacon damaged

NARRATIVE HISTORY OF FLIGHT (Please type or print in ink.)

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Everything was normal in my preflight inspection. I followed the checklist we keep in the plane to perform my preflight. I had my piece of paper with all my frequencies, runways information, traffic pattern altitude, planned traffic entry, planned altitude, my minimum altitude, checked the weather at both locations. I took off runway 34 around 1300 and went northeast to KOLG. The weather was clear, the ceilings were about 12,000. It was a bit bumpy as I chose to follow the river up to Solon Springs. At 20 miles away from KOLG I obtained weather from their AWOS. It reported winds from 220 at about 5. I checked again at 15 miles out (I typically check the weather at least twice because I like to give myself extra time to determine runway) and it reported 260 and 200 and about 8kts. I double checked on foreflight that runway 19 was my best choice. Double checked I was at traffic pattern altitude 10 miles out and made my 10 mile call. At 5 miles, I made my 5 mile call with my intention of entering crosswind for runway 19. I focused on maintaining my approach airspeed, maintaining my altitude until the proper time, and keeping track of power as needed. The approach was a bit turbulent as there are bodies of water around the airport. I was going to practice a crab to land, but didn't feel confident to do so at the time, so I performed a side slip and kept my nose on centerline. I came down and my wheels touched the ground but came back off the runway. I couldn't get back down despite trying to keep the nose to the horizon. By the time I was down solidly, I was nervous that performing a go-around was too late due to not enough runway and/or I'd hit the trees and powerlines at the end of the runway. I didn't think I'd be able to get off the ground and climb at an efficient rate with my flaps currently down. So I tried to land and stop. I saw the end of the runway but I attempted to maintain centerline and control, but the plane veered right. Once the nose was pointing about 45 degrees from centerline, I knew I couldn't correct with rudder safely and just tried to maintain wings level and let the snow absorb the energy. The nosewheel hit a dense pile of snow and tipped over tail over nose. As I was tipping over, I braced hands against the windshield and ceiling. Once I confirmed there was no more movement, I unbuckled my seatbelt to get out. I checked on the radio to see if anyone was around, but no response. I quickly turned off the engine/took the keys out, turned off the master switch, and turned off the fuel. I grabbed what I thought I would need and got out as soon as possible. At that time I called [REDACTED] the owner, to inform him of the situation and receive guidance from there. As soon as we hung up, I took pictures from as many angles as I could and sent them to [REDACTED]. Then I went to the FBO to wait for him to and the airport manager to arrive.

OPERATOR/OWNER SAFETY RECOMMENDATION (How could this accident/incident have been prevented?)

Initiate a go-around earlier on the approach if you aren't 100% comfortable and confident.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on a separate sheet.)**Was there Mechanical Malfunction/Failure?** ☐ Yes ☒ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)
