Description of Damage to Aircraft and Other Property *(Use additional sheet, if necessary.)*

damage to rt wingtip from impact with tree branches. Damage to left wingtip from impact with ground. Engine separation when airplane pitched up on nose and twisted in counterclockwise direction coming to rest facing to the north. Wrinkles in empennage due to sudden stop.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink.)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Normal takeoff, Normal climb out. Climb out in downwind leg to 2,500' pull power back and trim for cruise. turn west toward destination and engine died. Pitched for best glide & trimmed. Turned on electric fuel pump and FELT of gas selector valve thought it was pointed at rt tank. No restart. 2500' and approximately 2.5 mi North of 17 with beautiful sight picture. declared emergency & stated intentions. serious concerns about ability to clear new transmission lines recently installed across approach path to 17. Wondered aloud if i would be the first pilot to get tangled up in the power lines. Upon clearing the transmission lines I made a call stating I had cleared the power lines. feeling the relief and I still had this perfect sight picture. At this point i was less then 400 yards from the threshold and muscle memory or habit took over and just like a robot I lowered the gear. my perfect glide and my perfect sight picture deteriorated rapidly due to the increased drag. I swerved slightly to avoid a group of trees. barely clipped the branches with my rt wingtip and immediately stood on the left rudder to correct the yaw. the left wing impacted the ground and the plane swung counterclockwise and pitched up on it's nose and came to rest facing north. I watched the dust settle inside the cabin. I gathered my possibiles and began to scoot myself out of the plane. while i was exiting the plane I noticed a craft in slow flight passing over head and waved at them with my cap to signal that I was ok. Planned an escape route in case of post crash fire.

OPERATOR/OWNER SAFETY RECOMMENDATION *(How could this accident/incident have been prevented?)*

lay eyes on the fuel selector valve.

the tank I was on was worthless so changing tanks would've cost me nothing. I knew the left tank was empty and was sure i was running on the rt tank. turns out I was wrong and switching tanks would've saved all of this. I was set up with a great sight picture and a good glide. dropping the gear too soon cost me dearly.

Looking back in it's entirety this just like most other GA accidents should never have happened. I made a grievous error

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on a separate sheet.)Was there Mechanical Malfunction/Failure? ☐ Yes ☒ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)
