I joined the left hand downwind for runway 15 at West Houston Airport around 1:40 pm. Winds at pattern height were approximately 15-20 knots from the south and AWOS broadcast surface winds of 15 knots from 150 degrees. During the flare and just before touchdown, a wind shift or gust from the left caused the left wing to rise rapidly at a rate that couldn't be corrected and the right wing struck the runway pulling the plane off the right side of the runway. The nose dropped and the nose wheel broke off. The remainder of travel was sliding across the taxiway into a grassy area and coming to rest upright.

OPERATOR/OWNER SAFETY RECOMMENDATION *(How could this accident/incident have been prevented?)*

Minimize flaps on days with higher winds that could be gusting.
