Description of Damage to Aircraft and Other Property <i>(Use additional sheet, if necessary.)</i>					
NARRATIVE HISTORY OF FLIGHT <i>(Please type or print in ink.)</i>					
Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible. This is an account of the accident that happened at KTQH on April 6, 2026. I was endorsed to use Skyhawk N1203F. This was my second student solo cross country flight. I filed a flight plan with FSS and requested flight following from KRVS. It was a VRF day with calm winds and I departed runway 19R at KRVS at approximately 3:42 pm CST. Approximate ETE was about 43 minutes. The flight went smoothly, and I determined that I would land on runway 17 at KTQH once I received ATIS. I crossed midfield and entered into a left downwind. I called all my legs and entered a stable final approach. Upon landing centerline and rolled about 300' - 400'. At that point, the plane began veering left and off the runway. I did not want to abruptly hit the right rudder in fear of tipping the plane and decided to let the grass slow me down. I determined I could settle to a controlled slow stop on the grass. As the plane began to slow to a stop I ran up on a shallow ravine that was just a bit soggy from a recent rain. The front wheel got stuck in the mud, and the plane very slowly began to tilt over. As this was happening I decided to brace myself for the impact. Once the plane was settled, I exited and walked away from the aircraft. All of my hours have been in the same aircraft, N1203F, for a total of 45.5 total hours total of which all have been completed in the previous 12 months.					
OPERATOR/OWNER SAFETY RECOMMENDATION <i>(How could this accident/incident have been prevented?)</i>					
I debriefed this flight with another instructor at my flight school. She believes the culprit was the shoe I wore on that day. She recommends flat bottom shoes with little to no soles, in order to feel the rudder input. My shoes were thick soled athletic sneakers, which she states, does not allow you to fully feel the rudder controls. She has personally experienced this and also corrected other students by suggesting a new shoe.
