Description of Damage to Aircraft and Other Property *(Use additional sheet, if necessary.)*

Left Landing gear collapsed, one main rotor blade broke from main rotor head, other three main rotor blades contacted the tail boom, tail boom departed from the aircraft.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink.)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Pilot [REDACTED] and I Departed animus airport in helicopter N926ES at approximately 11:30 AM on May 7, 2026. We flew approximately 10 minutes to Durango airport where we started conducting emergency procedure training for the MD500C series helicopter. This was my second flight of the day. The first flight was 2.4 hours conducting the same training to another pilot. The winds were light and variable shifting from all directions. The windsock on the south side of the airport, near our training location, was shifting mainly from east to west with very little wind. We were using the taxi way and runway in both directions due to shifting winds. After one hour of flight training, and after numerous straight in auto rotations (approx 8-10), we entered a straight in auto rotation to taxiway Alpha parallel to runway 21. Our intended point of landing was taxiway Alpha and Alpha six. After rolling the throttle ground idle. The pilot in command, [REDACTED] lower The Collective and initiate a straight auto rotation. The auto rotation was going to be a little long having us go past Alpha seven, so we slowed down a little bit at approx. 700 ft AGL in the straight in auto, and then once the intended pointed landing looked in sight, we lowered the nose of the helicopter to gain our air speed back. At approximately 400-foot AGL or rotor RPM and air speed was within the green range. As we started a flare and started to level the nose for landing the aircraft drop suddenly as if we lost all lift within the rotor system. At approximately 10 feet above the ground, we both simultaneously pulled up the collective to cushion the landing with no result. The helicopter contacted the asphalt taxiway on its landing gear, collapsing the left side skid. The aircraft then rotated in an unknown direction and slid for approximately 100 feet. After the rotors stopped rotating, and the aircraft came to a stop both occupants exited the aircraft and called 911. After we called 911, we noticed the winds coming from the opposite direction the windsock near our location was showing.

OPERATOR/OWNER SAFETY RECOMMENDATION *(How could this accident/incident have been prevented?)*

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on a separate sheet.)Was there Mechanical Malfunction/Failure? ☐ Yes ☒ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)

Total Time/ Cycles On Part

_____ Hours

_____ Cycles

Time Since This Part Inspected/Overhauled
