Description of Damage to Aircraft and Other Property *(Use additional sheet, if necessary.)*

The propeller struck the ground, necessitating replacement of the propeller and inspection of the engine. Firewall, belly, and interior structure of the aircraft were damaged as part of the landing.

Point of note for the ELT, the aircraft never ceased forward motion so the G switch was not activated.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink.)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Damaged propellers on aircraft Cessna 172S N964SP on May 24, 2026, during local student solo for landing practice at KGTU. Pattern work during ~9.30-11.30 CT, with the incident time stamp at approx. 11.25 CT. Incident occurred during touch and go on runway 36. Damage is a result of a porpoise, attempting a soft field landing. The plane touched down and was already on the ground before pilot could execute a go around decision - this happened after it bounced off the runway for a second time. Wind conditions were calm to light during flight (max 3 knots), VFR conditions, clear skies, visibility 10 sm, no turbulence, no precipitation. KGTU runway 36 in use at time of incident which has good asphalt. Dry surface, no obstructions. Weather briefing with ForeFlight, current airport conditions obtained through ATIS at KGTU, wind checks during pattern work.
