Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

On March 25th, a UAL technician noted damage to the lower skin in fuselage sections 18 and 19 prior to flight in DFW while performing routine maintenance. Further inspection revealed damage to the APU diverter, APU drain mast, and aft potable water drain mast components. UAL engineering arrived on site on March 26th and performed further evaluation. Damage was noted on the lower fuselage skin spanning from FR66 to FR72 axially. Forward of FR70 (section 18), the damage spanned between STGR42L and STGR42R circumferentially. Aft of FR70 (section 19), the damage spanned between STGR33L and STGR33R circumferentially. An inspection of the internal fuselage structure was performed revealing multiple areas of deformation. FR70 supporting the APB was distorted with associated distortion in a segment of the APB itself. (Continued on extra sheet).

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

See Included Pilot Statements.

ADDITIONAL INFORMATION (Please type or print in ink)

Use this space if additional space is needed for any answers.

Continued from Damage section:

A central support beam between a lower segment of FR70 and a horizontal floor beam above showed signs of distortion. Portions of the lower skin at FR67 through FR70 were damaged completely through the skin plate thickness with light visible from the exterior at FR68 and FR69. Some degree of frame distortion between the stringers previously noted was present on FR68 through FR71 with fasteners, clips, and other attaching hardware showing signs of warping and/or disturbed sealant.
