Description of Damage to Aircraft and Other Property (Use additional sheet, if necessary.)

Structural damage to multiple aircraft in swarm. Damage varies by aircraft.

NARRATIVE HISTORY OF FLIGHT (Please type or print in ink.)

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Setup for the day was standard, performing motor and propeller checks on all aircraft, getting software and programming matched and updated on our show computers, as well as working together to lay out the grid of 500 drones in the space designated. Wi-Fi access points were distributed around the perimeter of the grid, and the RTK system was set up and dialed in for more accurate GPS location of the drones in flight. Safety checks included having the client trim a branch of one of the trees in order to allow adequate space for the liftoff sequence. Roughly an hour before show time, crew plugged in drones and brought the network online. Nothing out of the ordinary was noted in the process, and standard troubleshooting steps were taken to get everything ready for show time. Initially roughly 5 drones were not accepting data for launch, and standard process of troubleshooting Wi-Fi access points was implemented, finding all 500 drones on network with about 5 minutes left until show time. The RPIC determined that a soft reboot of the whole fleet would bring all aircraft to show ready (standard turning all drones off and on again via the ground control software rather than manually unplugging and replugging in order to reset the drones and allow for better connection to the network and a solid GPS link). Reboot went as expected, and systems showed green across the board, except for two drones, which were removed from the fleet, to stay on the ground at launch and allow the rest of the show to continue. Drones were armed, and the countdown sequence was initiated. At launch it was noted that the launch parameter file was not pushed after final paths had been set. This was noticed when the drone "layers" did not lift uniformly. In most cases, this would contribute to closer proximity of the drones during launch, ie. 1 m separation within the grid, but the show center was not completely aligned. The RPIC closely monitored the remaining drones in the air, and between visual observation of their stability, as well as telemetry readings from the ground control station, the RPIC felt it safer to allow the remainder of the show to proceed. Due to the steps involved with pausing a show, and recovering airborne drones, the designated flight paths were a safer option for both the audience and the aircraft. The remainder of the fleet flew as expected, and landed at their predetermined locations.

OPERATOR/OWNER SAFETY RECOMMENDATION (How could this accident/incident have been prevented?)

Following the preflight checklist

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on a separate sheet.)Was there Mechanical Malfunction/Failure? ☐ Yes ☐ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)
