NARRATIVE HISTORY OF FLIGHT (Please type or print in ink.)

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

NKS2045 DTW-LAS experienced severe turbulence on descent into LAS, while Flight attendants were doing final cabin checks. Two FAs were unable to complete their duties for landing, due to injuries. Deadheading FAs took over landing duties and disarmed doors for arrival. One FA suspects a broken leg, and the other, reports a head injury. The flight landed safely, taxied to the gate, and deplaned normally. No guests reported injuries. Both Flight Attendants were transported to the hospital. This event occurred a few miles past the AALAN intersection on the CHOWW4.

Captain Statement: My first officer and I were descending on the CHOWW4 arrival into LAS. We both had SkyPath on our iPads and the aircraft weather radar running nothing was showing out of the ordinary. No turbulence reported by SkyPath or ATC and nothing showing on radar. But we did notice widespread cumulus clouds off in the distance between us and LAS. We discussed that it would be safer if the flight attendants and passengers seated sooner in case of turbulence on descent. While the flight was still smooth we turned ON the seat belt sign at around 22,000'. And shortly after I called on the lead flight attendant on the interphone and told him to finish up service sooner and be to be seated for landing as soon as possible. I told him we may experience some turbulence on descent into LAS. He informed me they were already finished with their passenger briefings and the everyone was seated. I thanked him for being proactive. We were now descending VIA CHOWW4 and at around 17,000 we flew through a small build up of clouds. Nothing was painting on radar. Skypath was not showing any strong turbulence. We got 1-2 jolts of moderate turbulence lasting 3 seconds. The autopilot stayed on. To me the turbulence was not alarming and felt routine. We reported the moderate turbulence to ATC. Shortly after we got a call from the lead informing us of an injured flight attendant in the back of the plane. Since we were so close to landing at this point, we quickly called LAS ops informed them of the situation. We asked to have paramedics meet us at the gate. We continued to LAS and into the gate without delay. We made an announcement for everyone to remain seated so the injured can get help first. The EMT's were able to board the airplane quickly to help.

First Officer Statement: Descending into las on the chow4 arrival I could see some small cumulus clouds in the distance. Descending through FI 220 I turned on the fasten seatbelt sign. The captain and I decided to seat the flight attendants early. The captain called the flight attendants through the flight attendants call button and told them to be seated due to turbulence. Descending through 17,000 we couldn't avoid a build up of clouds and experienced about 3 seconds of moderate turbulence. The auto pilot stayed on during our whole decent. We had been monitoring SkyPath and it wasn't reporting any turbulence and didn't get any reports from atc. We also were monitoring the radar that didn't show any weather. We then told atc we needed to slow to 250 knots and reported moderate turbulence. After the turbulence we got a call from the lead flight attendant stating a flight attendant was injured. At that point we were on vectors to final. I called operations to notify them we needed medical personnel at the gate. We continued to land and taxi to the gate without delay. We requested all passengers to remain seated until the medical personnel could help the injured. We then notified the required people as to the event that happened.

OPERATOR/OWNER SAFETY RECOMMENDATION (How could this accident/incident have been prevented?)

Better communication. However no reports of turbulence was reported to our crew from ATC.
