Aircraft Damage

AREA 1: Wing to body fairing 194GR – 2 areas of adjacent damage consisting of dents, cracks, delamination.

AREA 2: Section 46 Fuselage skin – 5 areas of damage; 3 dents, 1 gouge, 1 stringer clip deformed.

Location is between STA 727I & STA 747 and between S-20R & S-21R.

AREA 3: Section 46 Fuselage skin – Multiple areas of paint scuffing and paint damage between STA 787

NARRATIVE HISTORY OF FLIGHT (Please type or print in ink.)

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Captain's Report

Landed uneventfully in ADQ on 26, runway condition was close to advertised. Exiting the runway on taxiway F, the conditions were still controllable and the brakes were effective. However, once further on the ramp we discovered the conditions were different than the reported NOTAM - FICON was 2" wet snow but looked like a lot of slush (actual conditions were standing water over ice.) Despite entering ramp at a controllable slow speed, eventually braking action went to nil. While we were attempting to stop, the aircraft weather vane and impacted GSE on aircraft right rear. No injuries but damage to aircraft.

First Officer's Report

The flight into Kodiak dealt with some threats including runway condition and tailwind. On descent were given braking action code 5s and a tailwind within limits. Landing was normal. As we slowed during the landing rollout tower asked for a report of conditions of our arrival. At the captain's instruction I gave a report of braking action report of good to medium as well as when we broke out of the clouds and the winds aloft. The tower cleared us to parking. We slowly taxied onto taxiway foxtrot and made the left turn onto the ramp, paralleling the direction we'd be parking, the captain noted that he was sliding and that he had no directional control. I noticed the plane began to weathervane, rotating counterclockwise. Looking aft out my window I could see baggage carts in their normal staging area. I was hoping we would not hit them, but they looked too close. The plane came to a stop 90 degrees to the taxiway, and I didn't feel any impacts. Once the Parking brake was set, I called Kodiak ops and asked if we hit anything. They mentioned we had hit some baggage carts by the aft baggage door, so we quickly made sure the APU was on the bus, shut down the engines and ran a shutdown checklist. Looking down at the ground I noticed standing water over ice on the ramp. Our most recent ramp FICON NOTAM reported 2 inches of wet snow and that all SFC areas were WIP. Once we exited the plane, we discovered it was nearly impossible to walk on the ramp, and we requested the ramp sand the area between the plane and the terminal.

OPERATOR/OWNER SAFETY RECOMMENDATION (How could this accident/incident have been prevented?)

The Company (Alaska Airlines) would like to continue investigating the event prior to submitting safety recommendations.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on a separate sheet.)Was there Mechanical Malfunction/Failure? ☐ Yes ☒ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)
