NARRATIVE HISTORY OF FLIGHT (Please type or print in ink)

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State time and point of departure, intended destination, and services obtained.

This was a training flight in a student provided C172. The first portion of the flight was a climb, level off and VOR tracking to and from the EWO VOR at 3000 MSL taking 30 to 35 minutes. The second phase was slow flight followed by recognition and recovery from approach and departure stalls. These exercises went with out problems or incident. On the return to the airport with the airport in sight and gliding distance, a engine out exercise was started by placing the fuel selector in the "Off" position. The student trimmed the aircraft for best glide of 65 KTS. He then started a turn for where he thought the airfield was, approximately 40 degrees off. After pointing out the airport, he then corrected back to the course to the airfield and attempted his restart procedures - Primer - in and locked, Mags - test and set to "Both", Carb heat - On, Throttle to full, Fuel selector "both". The engine failed to start. Now making the airport was questionable with a lake between us and the airfield so I elected to turn toward more open areas. In the process, I also accomplished restart procedures by re-adjusting the throttle and insuring the fuel selector was in "both". The student was attempting to start the engine using the starter. The engine did not start. I then selected a field for landing and the nose gear was damaged in the landing. When the aircraft came to a stop, I checked the student and myself for injuries and determined there were none. I then removed the ignition key, turned off the magnetos and set the fuel selector from "Both" to "Off". We then exited the air craft. I then notified FAA and then turned off the ELT.
