NARRATIVE HISTORY OF FLIGHT (Please type or print in ink)

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State time and point of departure, intended destination, and services obtained.

I departed KDED at 9:30am with a friend for a pleasure flight in clear skies and light wind. About 10:30am I entered the pattern at KDED for runway 23. When I rolled out of the base to final turn, the engine sputtered, then quit. I reached for an engine re-start and at this point I realized I could not make runway 23 on glide nor did I have time to re-start. I was going to end up in the trees so I activated the BRS parachute system. I felt the parachute slowing the aircraft and we entered the trees. The plane settled in the trees nose down several feet off the ground. My passenger and I were uninjured. The plane remained in one piece with damage to the wings and horizontal stabilizers.

I am not a mechanic so I don't really know why the engine quit. The FAA officer that inspected the aircraft estimated it had approx. 30 minutes of fuel remaining, but figured it was fuel starvation. He suspects that one of the tubes that draws fuel from the two fuel tanks may have been uncovered in the base to final turn and sucked up air causing the starvation. This seemed reasonable as the tubes are connected by a "T" that would draw fuel or air from the lighter of the two sides even though there appeared to be adequate fuel in the tanks.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

In hindsight it seems that tubes that draw from a deeper spot in the tanks may have prevented the incident. A fuel tank marking that indicated "empty" at a higher fuel level would have been helpful, as I would have entered the pattern with more fuel.
