NARRATIVE HISTORY OF FLIGHT (Please type or print in ink)

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State time and point of departure, intended destination, and services obtained.

I flew from Tamiami to (intended KDED DeLand) but diverted to X21 due to weather. There was a solid wall of rain and thunderstorms in front of me, so I choose the closest airport and landed (X21) without incident. Storm was appoaching more rapidly than I anticipated. I landed at a higher airspeed than I normally would have, because I was afraid of wind shear.

I taxied off the grass runway (the one I landed on) and onto the paved runway, and made the turn to taxi rapidly to the tiedown area. 50 meters after completing the turn, my tail was lifted by the rapidly increasing wind. Tail kept lifting, and at that point, I was just along for the ride...

Plane went vertical, and then over, and came to a stop upside down.

I shut the mags off, and switched off the master, undid the seatbelt and was lying on the roof of the plane.

Then the rain hit. It started to rain so hard, that I could not see 30 meters. There was no point to get out of the plane and get soaked, so I just stayed there. 10 minutes later, the rain intensity started to ease, and someone from the nearby T hangers saw the plane upside down. He drove out in his pickup, and I exited the plane and got in the truck.

We waited for the emergency crews, and the fire dept came. There were no injuries, and as soon as the fire department determined that I was not hurt, they departed because they had 280 calls within the last 15 minutes.

I organized one of the fixed operators on the field (that had a forklift) and we moved the plane off the runway.

End.

RECOMMENDATION (How could this accident/incident have been prevented?)**Operator/Owner Safety Recommendation**

If i had an additional 2 minutes before the wind hit, I would have made it to the tiedown area.

The extreme wind hit 5 minutes before the rain.

The wind also blew off a hanger door from the T hangers, and it also blew the windsock off the pole. The sock was gone.

I am not sure there is any way to prevent such an incident, other than give such an aggressive storm more leeway.
