NARRATIVE HISTORY OF FLIGHT (Please type or print in ink)

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State time and point of departure, intended destination, and services obtained.

On March 18th 2013 I preflighted N86AB at approx. 1100 hrs CDT for a banner flight that would depart KECP at approx. 1400 CDT that afternoon. The aircraft was fueled the day before. During preflight I took fuel samples out of the low-point drain and the gascolator. No water was observed the oil was a full 12 quarts and nothing was detected during the rest of the preflight. N86AB had 75 gals. of fuel on board. The engine start was done at approx. 1350 I got ATIS and contacted ground control. I was instructed to taxi to runway 16 and I asked for an intersection Mike departure which was approved. I did my control checks which were normal and the mag checks were normal carb heat was applied and there was a small drop in RPM, again normal. I received clearance for takeoff and flew to the banner pickup area where I made one pass to drop the hook and a second pass to pick up the banner. Approx. pick up time was 1358 from that point I flew towards the Southwest while climbing. Approx. 2 miles west of the airport at 900 ft MSL I had a sudden and total engine power loss, the lose of power was so sudden it was as if the mags were switched off, Oil pressure was in the green and the temp. was around 200 degrees. I checked the mixture and it was full forward, the right and left mags were on and the main fuel valve was on. Carb heat was applied with no change. I jettisoned the banner at about 500 MSL and picked a spot in the pine forest to put it down, the only call I was able to make on the tower freq. was 6AB going down in the trees. The plane mushed through some dead trees and then contacted some live trees at the end. The wings took the majority of the impact, the fuselage was intact. The fuel system was not breached. I exited the aircraft and called KECP tower to let them know I was alright. The engine quite at approx. 1405.

RECOMMENDATION (How could this accident/incident have been prevented?)**Operator/Owner Safety Recommendation**

Recommend that the crankshaft have 2 or 3 dowels placed at rear of crankshaft or some better way to secure crankshaft gear to crankshaft to prevent crankshaft dowel pin from shearing allowing crankshaft gear to spin causing total engine loss.
