NARRATIVE HISTORY OF FLIGHT (Please type or print in ink)

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State time and point of departure, intended destination, and services obtained.

After rollout on runway 04 I turned around to taxi back to the hangers. The wind from the southwest combined with the slippery runway caused me to make a wide turn ending on the northwest side of the runway. As I began the downwind taxi on runway 22 my wheels went into soft snow on the northwest side of the runway. I added power to move through the snow and to provide rudder authority to return to the center of the runway. The strong quartering tailwind prevented the turn and the snow continued to slow the wheels causing the tail to rise. As soon as the tail came up the wind got under it and the airplane began to nose over. I pulled power back, but was unable to prevent the airplane from nosing over. The propeller struck the ground while still turning and the airplane ended up on it's back on the side of the runway.

RECOMMENDATION (How could this accident/incident have been prevented?)**Operator/Owner Safety Recommendation**

In order to prevent this type of accident from occurring in the future, the pilot must recognize when conditions reduce the normal ground handling capabilities of the airplane and adjust for this by either deciding not to go or using extra caution while taxiing in wind including a willingness to stop, get out, and manually move the airplane if necessary.
