NARRATIVE HISTORY OF FLIGHT (Please type or print in ink)

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State time and point of departure, intended destination, and services obtained.

-At approximately 1445 checked translated METAR and spoke/discussed with my instructor. Ceiling was 7000'; winds variable at 5 kts; 10 mile visibility
-At approximately 1515 checked translated META for weather only change is ceiling was 10000'
-Completed Pre flight-Good
-Completed pre start procedures-Good
-Completed engine start procedures-Good
-Taxied from T-Hangers toward taxiway. 1st look of a wind sock was toward west. Sock was from the west at about a 30 deg value.
-Made right turn to use runway 25 because of the wind direction. Passed the main wind sock and wind was still from the west with a 30 deg value.
Proceeded to run up area for run-up procedures-Good.
-Turned, made call to assume 25 and took off.
-Flew Pattern and came around for a touch and go. Felt strong crosswind from the north after taking off.
-While in Downwind realized radio was on wrong freq and corrected
-On Final, made 25 and ground effect dropped the aircraft. With crosswind, touched left wheel first. Wind turned aircraft 45 deg to runway. while pushing right break passed to lights. Putting full right break on had no effect to straighten aircraft down the runway. Trying to keep from heading into parked aircraft and the fuel point was becoming challenging. Just as I entered the grass I took out flaps, turned carb heat off, gave full throttle in attempt to positively effect change. I got in the air just as I touched the taxi way. I had a tail wind and was approaching a hill. I was gaining altitude very slowly but struck the nose wheel and immediately struck the left wing tip on the hill. I bounced about 25 feet in the air, stall warning sounded and I immediately struck the nose and right wing tip. The plane then came to rest nose down. I then checked myself for injuries; turned masterpower off; turned key off; turned fuel valve off and exited the plane. NOTHING FOLLOWS.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

This could have been prevented by having a report of LLWS that was discovered later as non reported.
