These rules state the authority of the NTSB, define accidents, incidents, injuries, and other terms, and provide procedures for initial and immediate notification of accidents and incidents by aircraft pilots/operators.

#### A. APPLICABILITY

The pilot/operator of an aircraft shall send a report to the office listed above, based on accident/incident location; immediate notification is required by 49 CFR 830.5(a). **The report shall be filed within 10 days after an accident for which notification is required by Section 830.5, or after 7 days if an overdue aircraft is still missing.**

An aircraft accident, as defined in 49 CFR 830.2, is determined as an occurrence that involves a fatality or serious injury, or substantial damage to the aircraft. For occurrences that do not involve a fatality, the determination that the occurrence is an accident can be appealed by writing to the Director, Office of Aviation Safety, NTSB, 490 L'Enfant Plaza, S.W., Washington, D.C. 20594.

#### B. DEFINITIONS

1. "Aircraft Accident" means an occurrence associated with the operation of an aircraft that takes place between the time any person boards the aircraft with the intention of flight and all such persons have disembarked, and in which any person suffers death, or serious injury, or in which the aircraft receives substantial damage. For purposes of this form, the definition of "aircraft accident" includes "unmanned aircraft accident," as defined at 49 CFR 830.2.

2. "Substantial Damage" means damage or failure that adversely affects the structural strength, performance or flight characteristics of the aircraft, and that would normally require major repair or replacement of the affected component. NOTE: Engine failure or damage limited to an engine if only one engine fails or is damaged, bent fairing or cowlings, dented skin, small puncture holes in the skin or fabric, ground damage to rotor or propeller blades, and damage to landing gear, wheels, tires, flaps, engine accessories, brakes, or wing tips are not considered "substantial damage" for purposes of this report.

3. "Operator" means any person who causes or authorizes the operation of an aircraft, such as the owner, lessee, or bailee of an aircraft.

4. "Fatal Injury" means any injury that results in death within thirty (30) days of the accident.

5. "Serious Injury" means any injury that (1) requires hospitalization for more than 48 hours, commencing within 7 days from the date the injury was received; (2) results in a fracture of any bone (except simple fracture of fingers, toes, or nose); (3) causes severe hemorrhages, nerve, muscle, or tendon damage; (4) involves injury to any internal organ; or (5) involves second- or third-degree burns, or any burns affecting more than 5 percent of the body surface.

**Type of Fire Extinguishing System:** If a fire extinguishing system was used to fight an aircraft fire, specify the type(s) of extinguishing system(s) used. Examples include handheld extinguisher, engine fire bottle, cargo/baggage compartment fire suppression system, or airport emergency ground equipment.

**Owner/Operator Information:** Enter the owner information as shown on the registration certificate. Commercial operators, enter the operator information, including "doing business as" when applicable, as shown on the operator certificate.

**Revenue Sightseeing Flight:** Indicate whether the accident aircraft was conducting **revenue** sightseeing operations under 14 CFR Part 91 at the time of the accident.

**Air Medical Flight:** Indicate whether the accident flight was being conducted for the purpose of carrying medical personnel, patient(s), or organs.

**Public Aircraft:** Federal, state or local government flight operations such as official travel, law-enforcement, low-level observation, aerial application, firefighting, search and rescue, biological or geological resource management, or aeronautical research. Indicate whether the flight was conducted by the armed forces, federal, state, or local government.

**Purpose of Flight:** 14 CFR Parts 91, 103, 133, 136, and 137: Indicate the type of operation that was being conducted at the time of the occurrence using the following definitions:

**EXECUTIVE/CORPORATE**--Company flying with a paid, professional crew.

**FERRY**--Non-revenue flight under a special flight or "ferry" permit. Refer to 14 CFR 21.197 for details of special flight permit issuance.

**FLIGHT TEST**--Flight for the purpose of investigating the flight characteristics of an aircraft/aircraft component or evaluating an applicant for a pilot certificate or rating.

**INSTRUCTIONAL**--Flying while under the supervision of a flight instructor or receiving air carrier training. Personal proficiency flight operations and personal flight reviews, as required by federal air regulations, are excluded.

**OTHER WORK USE**--Miscellaneous flight operations conducted for compensation or hire such as construction work (not 14 CFR Part 135 operation), parachuting, aerial advertising, towing gliders, etc.

**PERSONAL**--Flying for personal reasons (excludes business transportation) including pleasure or personal transportation. This also includes practice or proficiency flights performed under flight instructor supervision and not part of an approved flight training program.

Truncation of cowl, engine and entire front of airplane. Front tire snapped off from strut and strut snapped off from airframe. Right and left wing-tips bent and distorted and left wing-tip torn from wing. Both right and left flap housings bend and distorted. Small part of wind screen cracked and broken. Propellor bent and spinner crushed. Unknown damage to the engine and engine-mount. Unknown damage to engine and flight instruments.

**NARRATIVE HISTORY OF FLIGHT** *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

I was flying from my home airport (Match Mate NK74) to Waterloo Airport (Airtrek D93) to join some fellow pilots for a lunch at a restaurant down the road from the airport. I had never flown into D93 before so I consulted the Airport Facility Directory Northeast U.S. for the pertinent information that was required to land, including runway orientation, field elevation, etc. There were no NOTAMs listed for this airport. En route I checked the AWOS at nearby Finger Lakes Regional airport (0G7) which was reporting at the time winds at 310 @ 4 knots. With that information I determined that it was best to land on runway 28 at D93 opposed to runway 10. I switched to the destination airport's CTAF frequency of 122.9. The airports elevation is 590 and so I entered the pattern at 1,600 feet and made all appropriate calls for a landing on 28, including left-down-wind, base & final. The runway is a little shorter than I'm accustomed to landing on (2275X85) and so I decided to try to touch down as close to the beginning of the runway as I felt was safe. On final I was coming in with an normal guide slope for the approach, but along the final leg of the pattern I decided that I was a little higher than I wished to be if I was to utilize as much of the runway as I could. I increased my flaps from 10 degrees to 20 degrees and and increased my decent angle appropriately and safely. This is when power lines that are about 50ft high and run perpendicularly to the runway at the very edge of the runway came into view, and I realized that I probably was too low to clear them. My airspeed at the time was 80mph and I was most likely less than 100 feet from the lines when I discovered that they were there and that I had little to no time to react. Before I knew it I felt one of the tires (I'm assuming it was the left main tire) come into contact with the power line causing the plane to acutely yaw and nose down to the left. The only corrective action that I remember taking was to turn the yolk al the way to the right to counter-act the banking to the left as I feared that I might roll on impact. I impacted the runway (soft filed) on the left-side of the runway and about 75-100ft from the beginning of the runway. Once I realized that I was okay (no passengers were with me) I turned off the main power switch and the ignition off and climbed out of the plane and called Ron Buxenbaum (my CFI) who was at the luncheon. He came right over with his grandson (Alex), who is also a certified pilot, and after making sure that I didn't need immediate medical attention, instructed us to turn off the fuel shut off valve, which we did. With the help of a gentleman named Fred who cares for the airport we towed the plane onto the adjacent apron and safely secured the plane. The airplane is still at D93.

**RECOMMENDATION (How could this accident/incident have been prevented?)**

Operator/Owner Safety Recommendation

A NOTAM for the wires obstruction the approach for runway 28 might be listed in the AFD.

The orange balls that mark the wires appear to be old and faded and might be replaced with new making balls.
