NARRATIVE HISTORY OF FLIGHT AND ACCIDENT

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Preflight inspection was performed at Shelby County airport (KEET) on 3 July by both the pilot and the CFI. Both pilots opened both wing tanks and verified that they were full. Fuel was drained and inspected for water and contaminants by both pilots.

The CFI performed three landings for currency at KEET. Both pilots then departed for KMVC.

At KMVC the RNAV/GPS RWY 03 approach was flown in VFR conditions for training purposes. A GUMPS check was performed and verified by both pilots prior to minimums.

A go-around was performed at approximately 100' agl. Landing gear and flaps were retracted. At approximately 400' agl the engine sputtered, went quiet, came back on briefly, then went quiet again.

The CFI immediately switched fuel tanks, verified the fuel boost pump on, checked that the mixture was rich and checked that the magnetos were both on. The pilot verified that all these steps were taken. The CFI then established best glide speed and began looking for a possible landing spot. The best option appeared to be to the right and an approach was made to a field.

Upon landing the aircraft struck a tree and the left wing was severed. Aircraft came to rest inverted. CFI egressed through the door and helped the pilot egress through the left window.
