Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State time and point of departure, intended destination, and services obtained.

On 7-25-14 I was going to Ferry W425LS from 17J to 1J0. I started preflight and loader (Terry) said oil was checked evening before and boss told him to add 1qt before I left. He climbed up checked oil and added oil while I preflighted the rest of aircraft. At about 9:15 I started up and all gauges was normal. Fuel was full. Weather was clear & calm so I departed and climbed to around 1000' on ferry. At 3 miles from 1J0 I made radio call for my intentions and started a slow descent checked all gauges and were normal. At $\frac{3}{4}$ mile out and 500' I reached to pull torque off a little to start slowing down and the engine went to screaming and prop went to wind milling. Hunks of metal coming out the right exhaust and down side of plane. I immediately looked at fuel gauge and it was between $\frac{1}{4}$ and $\frac{1}{2}$ then pushed prop and torque forward with no response. looked to end of runway and knew I could not make it and a field behind me was not an option. I made a right turn towards some smaller trees leveled up and entered the top of big oak tree. I went thru it and down to ground. When it stopped I shut electrical & fuel off, unbuckled and unplugged my helmet, climbed out and walked out to field at around 10:00 est. The terrain is flat with scattered fields and woods.
